

RADIO NEW WORLD

This is to prove that you,.....
.....in.....
have received Radio New World. It happened on the. .of.. ...19...

Radio New World is a project of two independent privately owned radiostations coöperating in this, they are Radio Torenvalk and Radio Tonair. Both stations are located in the city Gaanderen, Radio New World however is NOT operating from Gaanderen but from a secret location somewhere in the world.

Radio New World is non-profitable and non-commercial, its intention is rarely to make a profit but more likely to fascinate listeners and to puzzle other station-operators!!

TECHNICAL DETAILS

TRANSMITTER

= 2 x Rhodes & Schwarz

POWER OF TRANSMITTER

= various from 5 watt up to 5 kilowatt

AERIAL

= copper wire

GROUND

= very wet

FURTHER EQUIPMENT

= constantly changing

INTERESTING DETAILS

TECHNICAL STAFF

= none

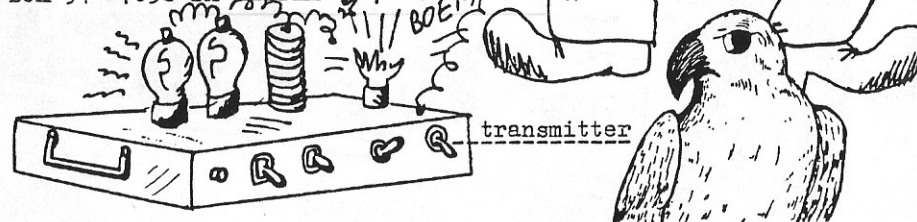

DEEJAYS

It is possible that you hear us on various frequencies, splattering all over the place, please make sure your radio is fused!!!

PO BOX 94 7038 ZH ZEDDAM

RADIO NEW WORLD

radiotelex

Issue 141 / Vol. 6

January 4th, 1989

c/o Duempter Strasse 6, D-4100 Duisburg 12, West Germany.

Dear radio enthusiasts,

welcome to Radiotelex in 1989 ! Hopefully the new year has started in a good way for you, we shall try to do our best by presenting another bumper issue which contains all the logs from the Christmas and New Year's festive season thanks to your kind support. By the way, it seems as if there are more contributions when the deadline isn't a Sunday because it is possible to send in any logs and news by mail, at least within West Germany. We'd be interested to know if the majority of readers would like us to issue this magazine on a weekday regularly or if we should continue with our present scheme of editing the mag on Sunday.

To answer one of our readers' enquiry, Radiotelex does not offer any merchandise which deals with Free and Offshore Radio in any way, in that special case we don't have any posters etc. for sale but can only offer you this magazine which honestly takes enough time to compile each fortnight, so we are more than likely not to become a free radio supermarket in the near future.

Please don't forget that the next deadline for RT 142 will be in less than a couple of weeks' time, on Sunday once again, January 15th, 1989 to be precise. Logs and news can be phoned in at the usual number between 1400 and 1700 hrs UTC that day or sent to the usual address.

At last let's get into our giant list of what's been on the bands ...

Radio Titanic International (Dedemsvaart maildrop) started its activities this year with a 90-minute-relay over Weekend Music Radio on 6317 kHz, a repetition of a new Tim Cooper show intended for their 13th anniversary broadcasts in November 1988 which didn't go out due to technical problems (for details see RTI's updated info-booklet). The next transmission of RTI will be broadcast # 100, indeed a special one but it is yet unknown whether it will be aired before the station's annual birthday celebrations or not.

A new project of apparently Dutch origin called XMAS Radio made it to the airwaves on Boxing Day between 0900 and 1400 UTC using 7315 kHz using 50 watts of power. Some really interesting programmes such as Baptist Johnny talking about what Jesus did at 21 (thus some sort of answer to World Mission Radio, hi) along with an album music format was aired. On New Year's Day, a station IDing as Classic Tracks was heard on 7315 kHz which is believed to be a new name for the same project. The address for both stations is Postbus 11175, Amsterdam, Netherlands.

Finally, we are sad to report that Wavelength issue 25 will be the final one from that excellent British based magazine which has been featuring a great variety of aspects of free/commercial radio. The farewell edition should be published in January 1989. The address for all correspondence is Po Box 5, Hunstanton, Norfolk, PE36 5AU, England.

That's about it for this time except for a look at one of the transmitters used by German shortwave pirate Süd-West-Radio (see below) as well as the brandnew info-sheet issued by Radio New World which is rather funny. Remember we'll be back soon, 73s & FFFR !

Britain Radio International, c/o Postbus 19074, 501 DB Utrecht, Holland or 32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England, were heard with a test transmission on 6240 kHz January 1st, 1989 as the station is presently looking for a new frequency to continue their regular broadcasts every 2nd & 4th Sunday of the month. The 6304-outlet previously used seemed to suffer from quite some QRM, e.g.

48 Metres S.W. EVERY 4th SUNDAY

Britain Radio INTERNATIONAL

utility as well as La Voz del CID from Latin America which was still audible up till 1100 UTC. Meanwhile, the normal broadcast schedule has been suspended in favour of tests but will be back as soon as a new permanent channel has been found. Needless to say, reports for those tests are very welcome.

To France and to Radio DJ, c/o B.P. 130, 92504 Rueil Cedex, France, which continues to transmit about every two weeks with its own tx of 10-15 watts power, usually on 6265 kHz though they were noted on 6280 kHz for the first time on New Year's Day, maybe a new frequency? Listen out for the next broadcasts which should take place on January 8th and 22nd between 0900 and 1100 UTC. Additionally, DJ is also relayed by French colleague station Radio Luce every two weeks on 7374 kHz 0800 - 0900 UTC, next on January 15th and 29th.

Radio International from West Germany has been in the loglists for a few months by now thanks to their usually brief transmissions of MOR/Schlager/Oldies music tests with rare announcements in German mostly. This station appears to have changed its name by the new year and is now identifying as Radio Sunrise. During the broadcast on January 1st, an address of Postfach 1202, D-4709 Bergkamen, West Germany, was heard, so was the station announcement that it would be interested in "QSL mail" (ie. reports etc.). The station is normally active around 6270 or 6235 kHz at various times, with a power of some 10-20 watts. The original Radio International had been broadcasting on medium wave 1485 kHz and FM as well and was raided several times, the last time probably in mid 1986.

Ireland - The End? (as far as free radio is concerned at least). Following the introduction of the new legislation in Eire it appears that all unlicensed radio stations, ie. all broadcasters except for the state-run RTE, have closed down to apply for a licence. The only station we know which is still on the air (logged on 6910 kHz January 3rd, 1989) is Radio Dublin. All shortwave pirates including Radio Rainbow International/SFRN/Fax/Boyneside Radio, Westside Radio/Pandora have put out final broadcasts over the holidays and seem to have ceased transmissions for good. Time will tell if there will be shortwave activity from Ireland in future, right now the spot to watch is 6910 kHz!

The Italian Radio Relay Service is reported to have concluded its series of tests on 7160 & 9860 kHz with a listeners mailbag programme which was aired on December 24th, 1988. It seems that the station hasn't been logged ever since, we're curious of further developments. IRRS, P.O.Box 10980, 20110 Milano, Italy.

Radio Meteor (Dedemsvaart-address) has been fairly active over the Christmas period at various times and on a number of frequencies including 6200, 6238, 6239, 6258, 7315, 7369 and 7370 kHz. The tx power used was 60 watts. Unfortunately, there are no logs for that station again on the continent or from the UK, perhaps listeners should be told in advance when and where to check out for free radio signals from Finland.

N E W S D E S K

Radio Action Int'l made its first broadcast on shortwave on Christmas Day using 6207 kHz, sometimes severely jammed out by Radio Arena from Holland who were just 2 kHz below. The contact address for the station is Postbus 26, 7030 AA Wehl, Holland. It was announced that reception reports should be written in German or Dutch preferably rather than in English. We believe that this station has nothing to do with another project which used the same name in summer 1985 for a few broadcasts on 6300 kHz announcing an address in Drachten/NL.

Yet another new (?) station from the Netherlands turned up on 7314 kHz on New Year's Eve calling itself Radio Black Power. The following address was announced during the broadcast: Postbus 59, 7260 AB Ruurlo, Holland.

Atlanta Radio, P.O.Box 5, Hunstanton, Norfolk, PE36 5AU, England, is going to celebrate its 10th birthday with a special transmission next Sunday, January 22nd, on two frequencies in the 48 metre band. The station will also issue a C-90 documentary tape containing the Atlanta Radio history 1979-1989, available for £3.00 from the above address.

Radio California, Postfach 220342, D-5600 Wuppertal 22, West Germany, tested an own 25-watt-tx this morning on 6312 kHz with good results.

Radio East Coast Holland has finally announced a mailing address which is (surprise, surprise !) Postbus 536, 7900 AM Hoogeveen, Netherlands.

The FRS-Holland transmission today on 6240 kHz should have also taken place on 7315 kHz but didn't due to various reasons. Nonetheless, FRSH is going to test a new outlet on that frequency within the next two or three months. Address: Postbus 41, 7700 AA Dedemsvaart, Netherlands.

Radio International from Italy has recently been noted on 1620 kHz with very good signals in Central and Northern Europe during the night, perhaps the station has increased power or improved the mode. According to the 1988 edition of the WRTH, the address for that station reads as follows: Corso Porta Palio 36, 37122 Verona, Italy (2 IRCs required for a QSL-card !).

Radio Titanic Int'l (Dedemsvaart-address) would like to point out that both their 13th birthday shows in November 1988 on 5295 & 6240 kHz have been aired over their own transmitters and that no relay station was used then. Other magazines should please take note before printing the wrong information.

Radio Tower, Postbus 19074, 3501 DB Utrecht, Holland, is reported to have tested on 15642 kHz on January 8th. No logs were received for that broadcast yet but the station should carry on testing on 15642 & 17422 kHz over the next six weeks or so (c/f RT 140).

The Voice of the Leek broadcast logged on 6203 kHz January 1st is said not to have been put out by the station but was once again a hoax !

Here's some further info. on the XMAS Radio/Classic Tracks project which was heard over the Christmas/New Year's season on 7315 kHz: The station was the brainchild of ex-Super Clan Radio manager Herbert Visser. XMAS Radio was actually on the air three times, December 25th 1700-2200 UTC on 6258 kHz, December 26th 0000-0500 UTC on 6258 kHz and 1000-1500 UTC on 7315 kHz. The two broadcasts of Radio Black Power, Postbus 59, 7260 AB Ruurlo, Holland, on December 31st and January 8th were transmitted over the XMAS tx which was on loan to the Black Power op. at that time. Meanwhile, Classic Tracks (Postbus 11175, Amsterdam, Holland) appears to be the definite new name for the station which should be back with further broadcasts in 1989 unlike Black Power which probably won't be heard for some time in the future.

W.F.R.L. Worldwide (Hunstanton maildrop) informs us that as from February 12th, 1989 onwards the station will be moving its 48mb channel from 6300 to 6275 kHz for regular 2nd Sunday transmissions. WFRL is hoping to put the tx power on 48 & 41 metres up to around 300 watts very soon. By the way, the station failed to broadcast anything on 7385 kHz on January 1st due to a faulty 807 valve but put out a test on Friday, January 6th on 41 metres. The 9 and 11 MHz broadcasts also didn't take place in January due to other commitments by the staff but the worldwide service should be back next month.

Bye-bye from R a d i o t e l e x ...

Issue 142 / Vol. 6

January 15th, 1989

c/o Duempter Straat 6, D-4100 Duisburg 12, West Germany.

Hello DX freaks,

as a matter of fact less than two weeks have gone by since the latest issue of RT has come out, but don't worry we won't become some sort of weekly report but are going to stick to our fortnightly publishing scheme again from now on. After reasonable conditions over the Christmas/New Year's period conditions turned out to be rather disappointing over the last couple of Sundays, ie. on January 8th there weren't any stations from the UK audible here on 48 metres, something which hasn't been noted for a pretty long time. Let's hope that things will by all means improve soon.

Also heard were Radio Stella via the IRRS Milano on 9860 kHz around midday on both January 14th & 15th. The DJ was Jock Wilson. Apparently, tests from the IRRS on 7160 & 9860 kHz continue with programmes of World Music Radio and Radio Earth also logged this weekend. Radio Orion may have been on 6290 kHz some time during the morning today.

Radio Gaga Int'l is the name of a new German free radio station which plans to transmit over the facilities of Radio Waves and the IRRS Milano until an own tx is ready for use. Future programming shall include pop music, oldies and a competition, the station is also going to publish a "Free Radio QSL List" on an irregular basis which will be available for DM 1.10/1 IRC. Further details from Postfach 220342, D-5600 Wuppertal 22, West Germany. The station already had a brief appearance through the Christmas programme of Süd-West-Radio.

The Italian Radio Relay Service has announced that their full official relay broadcasts will begin on February 12th, 1989 Sundays only on 9860 kHz at 0800 UTC. It is a bit uncertain which of the stations presently using the IRRS will still be heard then. World Music Radio, Radio Limit and Radio Marabu from Germany as well as Radio Stella are currently the only free radio stations heard via the IRRS though others have announced their plans to use that service.

Quoting a back issue of Play-DX, a station called Radio Piper was received on 7453 kHz October 21st, 1988. It has been suggested that this was probably a shortwave relay of the FM station which is located at Fontanafredda.

Rock Radio International, Northern Ireland's only shortwave station at the present time, continue to broadcast on 6272 kHz every Sunday though their signal seems to be only fair even in the UK. The mailing address for this station is 105 Bushmills Road, Coleraine, Co. Londonderry, BT52 2BS, Northern Ireland.

Radio Scorpio (c/o Postbus 19074, 3501 DB Utrecht, Netherlands) informs us that the station is going to resume regular broadcasts again next Sunday, February 5th, 1989. From that day onwards Scorpio will be heard via Radio Luce from France on 7374 kHz every 1st Sunday of the month between 0900 and 1300 UTC. The programme line-up for the comeback broadcast next weekend looks like this: 0900-1000 Harris, 1000-1100 Crime Time (Sam Spade), 1100-1200 Law and Order (Brewford T. Justice), 1200-1300 UTC Blackout (Tom Lorenzz). The station points out that reports will only be verified if some personal comments are also included along with at least one IRC/1US-S. Those who enclose an additional IRC will also get a couple of new Scorpio stickers. The two-hour-broadcast planned for December on 6238 kHz didn't take place due to circumstances beyond their control.

According to Anoraks UK, apparently Middlesex Music Radio has now changed its name to Radio Skywave for its shortwave outlet where they were heard on 6207 kHz January 8th, 1989. The address is B.M.Broadcasting, London, WC1N 3XX, England.

World Mission Radio, P.O.Box 346, Corona, California 91719, USA, was off the air for about two weeks recently but have been back on 6215 kHz since Monday, January 23rd, 1989 with the usual programming including Tom de Wit's "WMR Goes DX" Saturdays & Sundays at 1000 UTC.

Wanted. 30-watt-AM-transmitter for mobile broadcasts on 48/41 metres, including power inverter. Any offers please to Box 143, RT, c/o Dümpter Straße 6, D-4100 Duisburg 12, West Germany.

That's all for this time, thank you very much to all DX-reporters including those 7 people who phoned in with logs and news this afternoon. Deadline for RT 144 will be February 12th, 1989. Any info via the 600 Q telephone line is most welcome that day between 1400 and 1700 UTC! By the way, as far as the discussion regarding a different deadline date is concerned, opinions seem to be divided 50-50, so we'd be interested in further ideas!

radiotelex

Issue 143 / Vol. 6

January 29th, 1989

c/o Dümpter / Straße 6, D-4100 Duisburg 12, West Germany.

Dear Telex readers,

we're sorry to say that we don't have too much good news to report on this time, the first reason being that the raiding party has been on the road once again here in West Germany, in fact Radio Batida was visited by the German post office last Sunday during a broadcast on 6582 kHz. As far as we know this has been the first raid of a German shortwave pirate radio station since December 1984 when Radio Sylvia from Hamburg was victim of a bust.

The second reason is that we have to announce an increase in the price of this magazine. As most of you may know, the postage rates in this country will go up considerably by April 1st, 1989. Unfortunately, because of the fact that more than half of your subscription fees is spent on postage we have to introduce new (and higher) subscription rates then. Full details on the new rates will be announced soon, but please don't send any money now, current subscriptions may only run out earlier than originally intended. Don't worry we'll let you know in time, sorry for the bad news but remember we shall remain non-profit-making!

Following last issue's mammoth list of updaters, just a few this time, please note that all times mentioned are UTC (=CET - 1 hour)!

The station called "Big L Radio" mentioned in RT 141 was in fact Radio Orion ("The Big O"), apologies for that mistake.
The UNID logged on 7370 kHz December 26th, 1988 playing an RT-promo was very likely Radio Meteor with a direct broadcast from Finland. Not a bad catch at all !

Atlanta Radio put out some 30 minutes of IBA station "Southern Sound" after closing down their official programming on 6274 kHz at 1330 UTC on January 22nd. The two frequencies used that day were parallel at times but also carried different programmes later.

W.L.R. mentioned in their broadcast today that 6317 kHz would be the new frequency for the "Free Radio Update" programme.

NEWS

Radio Apollo Int'l, c/o P.O.Box 5, Hunstanton, Norfolk, PE36 5AU, England are going to be on the air again probably within the next couple of weeks on 6285 kHz. By the way, RAI should be celebrating their 7th anniversary towards the end of January.

As already mentioned in the editorial, Radio Batida from West Germany has been raided by the German DBP and police on January 22nd, 1989 at around 1400 UTC when transmitting on 6582 kHz. The officials confiscated the transmitter (20 watts, 1.50 mts high, 136 kg heavy) but left everything else untouched. Station operator Mike Ef was caught in the act and will be probably be charged for this offence later on. Apparently, the German DBP is still monitoring shortwave free radio stations though actions are obviously only taken if a station is rather active. As far as Batida is concerned, the station used to transmit from a home base for quite a long time and had also been known by the authorities for their FM broadcasts which also ran under the name of Radio Maeva a couple of years ago. Batida actually wanted to change its address by February 1989, you may send any final mail to the station: c/o Postfach 100227, D-3167 Burgdorf, West Germany.

Radio Colombo from Holland were heard with a brief test on 6263 kHz this morning. Interestingly, when they signed off the DJ said "This is Radio Black ... err, Radio Colombo". If you keep in mind that the station uses Postbus 102, Beekbergen, Holland, as a mailing address, Colombo is possibly the shortwave name for MW pirate Radio Black Non !

According to R.East Coast Commercial, the UK-based Delta Radio has tested on 6275 kHz on Wednesday, January 25th as well as the following Saturday, January 28th but hasn't been heard too well over there in the UK. You can contact the station c/o Hustanton.

Radio Europe located about 40 km east of Milano plans to start DX-programmes in English and Italian on Sundays and is also going to relay other stations on Saturdays soon, too. On November 20th/27th power was 40 watts, as from December 4th, 1988 the station uses 50 watts. Radio Europe is on the air Sundays only at present 0700-1130 UTC on 7294 kHz. 2 IRCs are required for a stencil letter, sticker and card, taped reports are also appreciated and will be returned with cassette recordings of California FM stations. Address: c/o Play-DX, Via Davanzati 8, 20158 Milano, Italy. DJ Alex is going to verify all correct reports. The station specializes in disco music.

Falcon Radio announced that they have now joined up with Radio Susan to form a new station playing only rock music, "The Rock of Europe" after many requests have been received for such a station on the shortwave bands. Their address is MAC, P.O.Box 109, Northampton, England. At the moment, however, only Falcon Radio is heard with a weekly rock service on 6875 kHz. Reception has definitely improved since 7315 kHz was left.

Jolly Roger Radio from Ireland have been heard quite regularly recently on 6229 & 6304 kHz (relayed by Riverside ?), they can be contacted at P.O.Box 39, Waterford, Eire. Please keep in mind that you shouldn't put the station's name on the envelope when writing to them.

Radio Meteor can now also be contacted through the FRC Finland, P.O.Box 82, 40101 Jyväskylä, Finland apart from the previously used Postbus 41, 7700 AA Dedemsvaart, Holland address. The Finnish maildrop is believed to provide a faster service of delivering listeners' mail to the station's operator.

Radio Starline, c/o Postfach 220342, D-5600 Wuppertal 22, West Germany, are once again looking for relay facilities after Starfleet Radio who had relayed the station a couple of times decided to drop those relays for security reasons. In the meantime, Starline has an own 25-watt-transmitter under construction, 6553 kHz may be used for further transmissions.

French station Sunshine Radio, 58 Rue Victor Hugo, 31800 Saint Gaudens, France, are reported to put out their next broadcast in February between 0800 and 1100 UTC on either 6325, 6975 or 7125 kHz with 6975 kHz being the channel to be used most likely. Nothing has been heard of that station outside of France yet, check it out !

Radio Tower, c/o Postbus 19074, 3501 DB Utrecht, Holland, were announcing today that they would be back with regular programmes every 2nd Sunday of the month beginning in March 1989. In future, Tower will be on the air between 0900 and 1100 UTC on 6240 kHz, then the station shall switch to 15642 kHz for the rest of the broadcast 1100 - 1300 UTC. The programmes on 15642 kHz may be extended up to four hours soon as well thus Tower would be on 19 metres 1100 - 1500 UTC. Listen out for the first Swedish service next month between 0915 and 1000 UTC, the German service with Tom Clay should be back in April ! Apart from that, Tower is going to put out a telex mode service for listeners who have the facilities of receiving this as from March 12th onwards before the regular programmes 0830 - 0900 UTC on 6240 kHz.

The Voice of the Netherlands were logged on 7490 kHz February 5th with good signals. At last, the station has introduced a mailing address which is Postbus 669, 7900 AR Hoogeveen, Holland (same address used by Radio Blond Pirate last year, by the way...).

Peter Hills of Radio Waves Int'l informs us that they should have a medium wave outlet in operation soon on 1615 kHz under the name of Radio Star Night. All pirate stations, especially Irish ones, are welcome to get in contact with the station for possible relay facilities. For more details write to R.W.I., c/o B.P. 130, 92504 Rueil Cedex, France.

4IFR from New Zealand are going to be heard via Radio Orion every two months, there will also be additional monthly relays over the tx of Radio Waves International from France. Please note that 4IFR (For International Free Radio) are now using the addresses of their relay stations, ie. c/o P.O.Box 1280, Rednall, Birmingham, B45 8SG, England or c/o B.P. 130, 92504 Rueil Cedex, France.

Finally, thanks to everyone who contributed to this issue, deadline for RT 145 will be on February 26th, 1989, the phone line will be open 1400 - 1700 UTC that day ! Meanwhile, keep on checking the bands even though there isn't a lot to listen to... 73s & FFFR,

radiotelex

Issue 144 / Vol. 6

February 12th, 1989

c/o Duempter /Wanne 6, D-4100 Duisburg 12, West Germany.

Hello there,

it's all been rather quiet on the bands once again over the last couple of weeks, so you may not be too surprised to find that this issue of RT is more a newsletter rather than a logsheet ! It appears that it's not only the poor conditions that affect Sunday listening but also the lack of professionally produced programming, especially as far as the Dutch and German stations are concerned. What's happened to the better days of Free Radio ?

Before we forget, yet another sad item to mention is that we have suspended the SAE service for the time being due to lack of interest. As most of you should know that service was intended to provide DXers with unused postage stamps from abroad which may be used as a method of return postage when sending a reception report. Well, anyway, if we receive enough response we may resume that offer some time in future !

Also reported active this morning is Radio Mirage which was using 7290, 7310 and 6280 kHz, the station may be back next Sunday again. Both Radio California and Radio Apollo Int'l plan to transmit in 2-3 weeks on 48 metres.

N E W S

The Anoraks Ireland mailing address of 310 Collins Avenue West, Whitehall, Dublin 9, Eire is reported to be no longer available to free radio stations (see also the item on "41FR" later on !).

Britain Radio International (Salisbury & Utrecht addresses) have told us that the station continues to test on 48 metres to find a new frequency for future broadcasts. So far, 6240 and 6225 kHz have been used, but also 6243 kHz was mentioned as a possible new channel. When BRI eventually returns, there will be new features introduced to the programming, new QSL-cards should be available within the next few weeks. By the way, unlike reports in other magazines said, BRI will keep its regular 2nd & 4th Sunday schedule in future, there are no plans to transmit on the 1st & 3rd Sunday of the month !

Radio Dublin were eventually raided by the Irish authorities on Tuesday, February 7th, but are reported to be back on FM only since Thursday, February 9th. The shortwave outlet on 6910 kHz hasn't been heard ever since.

According to Radio East Coast Commercial, Freesound Radio Int'l are about to introduce regular transmissions every last Sunday of the month on 6233 kHz. Address: c/o 32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England.

The Italian Radio Relay Service, P.O.Box 10980, 20110 Milano, Italy, commenced regular transmissions February 12th, 1989 with a 5-hour-line up of programmes. The schedule observed today reads as follows :

0800-0830	United Nations Radio (English)
0830-0900	IRRS mailbag programme (English)
0900-0930	Unesco Radio (English)
0930-1000	IRRS mailbag programme (English)
1000-1100	US radio plays & comedy of the 1930's & 40's
1100-1130	IRRS Swedish service ("Disco Action Show" with DJ Henrik Nykvist, not produced by the FRC Sweden as told in RT 139)
1130-1230	United Nations Radio (Italian & Spanish)
1230-1245	nonstop music
1245-1300	United Nations Radio (English)

No programmes of free radio stations including World Music Radio were heard which may not be too surprising with the amount of money the IRRS charges for relays.

News on truly exotic free radio, the Indian Ocean Broadcasting System was heard with a 30-minute-relay over Radio Tower February 12th on 6240 kHz. Further relays in Europe are lined up for the future (not necessarily via Tower, of course). In May this year, IOBS should be active again to the Indian subcontinent with increased power of 250 watts. Apart from that, the station hopes to use a mailing address in India soon, too. Meanwhile all letters should be sent to RT Drop Box, IOBS, Postfach 103771, D-2800 Bremen 1, West Germany.

Radio Marabu Int'l (Wuppertal & Utrecht addresses) is currently heard every two weeks over Radio Waves Int'l on 7440 kHz with a 60-minute-show. Additionally, the station should resume regular monthly broadcasts on 48 metres in 4-6 weeks' time. Marabu has issued a new info-bulletin and offers further listener's merchandise, a new QSL-card is also available for a correct report.

From January 20th, 1989 Marconi Radio Int'l should have started test transmissions on Saturdays & Sundays 0800 - 1300 UTC on 11380 or 11390 kHz with 100 watts. No current address is known yet, the station is based in Southern Italy. / Play-DX 534

Here's the programme line-up of Rock Radio Int'l, 105 Bushmills Road, Coleraine, Co. Londonderry, BT52 2BS, Northern Ireland, which continues to transmit every Sunday on 6273 kHz:
10.00 UTC "Kerry's choice" / 11.00 UTC "Ulster Top 10" / 11.30 UTC "The Country Show" with Andy / 12.00 UTC "Rockshock" with Wallis / 13.00 UTC "Ian's Mad Mega Mix" / 14.00 UTC "Sunday Super Seventies" with Andy / 15.00 UTC Closedown.

Radio Scandinavia began test transmissions via the IRRS on 9860 kHz February 19th, 1989 and has announced this address: P.O.Box 14006, 20024 Malmö, Sweden. The station offers a "free" cassette tape with recordings of the station for just 10 US-\$! Not a bad start at all!

Another unusual station is Radio Southsea, c/o 10 Bromyard Crescent, Paulsgrove, Portsmouth, PO6 3SP, England, which is a so-called tape radio station on cassette tape only (there were, however, a few broadcasts on FM and shortwave in 1982). Anyone interested is invited to send in blank tapes or £1 for a C-60 / £2 for a C-90 tape of Radio South Sea. The DJ line up at present includes Jonathan Rogers, Richard Gramme, Steve Jones and Joe Vincent but the station is looking for further DJs to join the staff.

Varied interest. Radio Limit Int'l is going to celebrate its 3rd birthday in March with a relay broadcast via R.Waves Int'l on 7440 kHz. Jolly Roger Radio is looking for stations to be relayed by the station on 6229 kHz (JRR, c/o P.O.Box 39, Waterford, Eire). The French authorities recently raided an unlicensed ham who used to operate on 45 metres (ie. 6660 kHz LSB)! Radio Tonair announced February 12th that they were testing with 2 kW of power and that the station would be back with real programming in a few weeks' time.

Radio Wahnsinn is the name of a new German radio project which should have its first broadcast via Radio East Coast Holland on 6240 or 6315 kHz next Sunday, March 5th. The DJ's name is Ricky Stone. There's no official address known for that station yet.

The tentative new address for W.L.R. reads as follows: 21 Green Park, Bath, Co. Oven, England. The station was heard on 6280 kHz today.

Stay tuned to shortwave, until next time 73s & FFFR from RADIOTELEX

c/o Duempter / Wasse 6, D-4100 Duisburg 12, West Germany.

Dear radio friends,

not a lot to say this time, and due to the amount of material we shall start off without any further ado. Before that, thank you very much to our contributors for this issue. Please note that the deadline for RT 146 will be on Sunday, March 12th, 1989. Logs and news can be rung in that day between 1400 and 1700 UTC as usual!

U
ANORAKS

NEWS DESK

Radio California (Wuppertal maildrop) intends to transmit every 3-4 weeks with its own 25-watt-tx, the main frequency is 6310 kHz but also 6282 or 6235 kHz may be used alternatively. RCI is also going to relay the first programme of another new German station called Star Club Radio some time in the summer this year. Star Club Radio will keep an all oldies format.

Thanks to Anoraks UK's "Weekly Report" we can now give you some further details on the recent raids at Radio Dublin. The station was first raided by the Irish authorities at 06.10 hrs on Tuesday, February 7th, 1989. The main MW, FM and shortwave transmitters were lost as well as studio equipment. Radio Dublin returned on FM 100.9 MHz only at 15.05 hrs the same day and suffered another raid on Saturday, February 12th. The station is now back on around 101 MHz FM with low power. As far as shortwave is concerned, it is very unlikely that the station will ever be heard there again !

Radio East Coast Commercial (Hunstanton address) hopes to bring back its 25 metre band transmitter on the air again in March which will then run in parallel with the usual 6815 kHz outlet. RECC may use 11400 kHz but listeners advice regarding a different frequency choice is welcome, a channel of 11480 kHz was announced this morning !

A Dutch station calling itself Radio Europe was heard on 7490 kHz January 8th, 1989. The station claimed to be located in the Eastern part of the Netherlands and announced just 8 watts of power. Perhaps another test put out by the VOTN ? Meanwhile, the Voice of the Netherlands (Postbus 669, 7900 AR Hoozeveen, Holland) hopes to continue with broadcasts every 1st Sunday of the month, probably on 7490 kHz with 175 watts.

Falcon Radio, c/o MAC, PO Box 109, Northampton, England, is now identifying as "Falcon Radio / The Rock of Europe" and transmits every Sunday of 6874 kHz 0900 - 1200 UTC with 30 watts. The current DJ line-up includes Peter Moss, Tony King, Mike Allen, Phil (ex-Radio Susan), Steve Anderson as well as Tim Teesdale who hosts the bi-weekly IRRS DX-programme 1000-1100 UTC. The IRRS, by the way, is part of Falcon Radio now. As the new station ID implies, Falcon is putting out a rock music format. The signal on 6874 kHz should improve soon with a new aerial to be installed shortly.

The Free Radio Service Holland (Dedemsvaart address) is going to start a new regular 5-hour-programme schedule on the 3rd Sunday of the month on 7315 kHz on March 19th, 1989. In the meantime, there may be further FRSH tests on that frequency, reports are particularly welcome from UK listeners !

Freesound Radio Int'l, c/o 32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England, can be heard on the last Sunday of the month on either 6233 or 6266 kHz with 20 watts of power. The present programme schedule reads as follows:

1100 UTC	"The Alternative Music Show" (heavy metal / dance music)
1215 UTC	"The Radio Show" with the latest news from the broadcasting industry
1300 UTC	"Freesound Feedback" (listeners mail).

Issue 146 / Vol. 6

March 12th, 1989

c/o Duempter Strasse 6, D-4100 Duisburg 12, West Germany.

Hello to you all,

welcome to yet another bumper issue as we've decided that it would be time again to include some items which we can't always be featured in this magazine because they don't necessarily belong to current affairs such as news and logs. However, we know that both QSL information and photos of free radio stations are quite popular among our readership, so here we go again !

A big thank you very much to all our contributors to this edition, whether you send in any news or phone in with some logs, all your support is highly appreciated ! Deadline for RT 147 will be on Easter Monday, March 27th, 1989 to be exact. The lines will be open here between 1500 and 1800 CEST, yes indeed, daylight saving time will be introduced in less than two weeks' time. Therefore, be extra careful if you work out the times in UTC for your Easter logs !

By the way, watch out for another new edition of the "RT Address List" which we hope to release within the next few weeks. All regular subscribers to this magazine will get a copy straightaway whether they like it or not.

N E W S

Atlanta Radio, c/o P.O.Box 5, Hunstanton, Norfolk, PE36 5AU, England, who celebrated their 10th anniversary on 48 metres a few weeks ago were heard again today on 6242 kHz. The station originally intended to be back after the end of April but maybe the lack of free radio activity on 48 metres made them change their mind meanwhile. The current programme schedule of Atlanta looks like this :

10.00 - 10.45 Mark Stafford
10.45 - 11.25 Atlanta Soundabout Programme
11.25 - 11.55 Paul Graham / Mark Davis
11.55 - 12.30 Sounds From The Seas
12.30 - 13.00 Phil Collins / Tim Stewart.

Finnish Free Radio
FM 96 MHz & SW
RIGHT-WING RADIO
P.O. Box 22 03 42
D-5600 Wuppertal 22
West Germany

Talking of the 10th birthday broadcast on January 22nd, 1989, the station was using an amplifier for part of the broadcast to be run at 100 watts on 6242 kHz. It would appear that for long distance reception this didn't give a better signal than 6275 kHz, the reason was probably that the two antennas were at 90 degrees to one another giving different radiation patterns.

Delta Radio from England has been heard with various test transmissions on Saturday afternoons on 6275 kHz. Delta announced in its broadcast March 11th that the station would be back next Saturday, March 18th on 6310 kHz. Regular programmes every last Saturday of the month should finally commence on March 25th with the following programme schedule :

12.00 - 13.00 Pete Edwards (golden oldies)
13.00 - 14.00 Norman Nelson's Rock'n'Roll Extravaganza.

Reports are most welcome at the P.O.Box 5 / Hunstanton mailing address.

Radio Europe, c/o Play-DX, Via Davanzati 8, 20124 Milano, Italy, is transmitting with 100 watts power on 7295 kHz as from February this year onwards ! The tx used is a Kenwood TS 440S (ham equipment ? -ed) and the v/s is called Alessio Bertini.

Not quite related to free radio but anyway, European Christian Radio from Ravenna are now testing Monday to Saturday 13.15 - 14.00 UTC on a new frequency of 9435 kHz. Checking that channel yesterday afternoon, we only found a strong utility hum there, so perhaps not the best choice ?!

Still in Italy, Radio Italia International are reported to be testing on 7140 kHz (the channel formerly used by Radio Spoleto) between 08.00 and 11.00 UTC.

No doubt the biggest private shortwave operation from Italian soil is the Italian Radio Relay Service, P.O.Box 10980, 20110 Milano, Italy which continues to transmit on 9860 kHz on Sundays only 08.00 - 13.00 UTC. The station seems to be replying to all reports now which have been received for the test period November 1988 / February 1989, in addition a rate card has been released with details on the amount of money the station charges for airtime on its relay service:

 **globe radio milan**
Italian radio relay service

JANUARY 1989 RATE CARD

	COMMERCIAL	RELIGIOUS & PUBLIC SERVICE	HOBBY & SPECIAL INTEREST
1-4 HRS/WK	159.00	127.00	65.00 (*)
5-10 HRS/WK	141.00	110.00	65.00 (*)
10-20 HRS/WK	124.00	93.00	65.00 (*)

Prices in US \$ per broadcasting hour or fraction.

(*) Low priority and no peak hours. Subject to airtime availability, at the discretion of IRRS management.

Radio Karibu has finally put out its first real test transmission last Sunday, March 5th, 1989 on 6315 kHz and were heard again today on the same channel. We have to point out that the station doesn't have a mailing address at the moment but listeners will be informed as soon as one is available.

Another mysterious new station, this time of probably British origin, is M.R.B.C. which have been noted quite regularly on Sundays with short broadcasts on 6280 kHz, e.g. on February 19th & 26th. Any further info on that station would be much appreciated!

Octopussy FM are scheduled to be heard through the facilities of Radio Waves International on March 19th & 26th. This project is supposed to be a one-off, however, as there should be two broadcasts that may rather become a "two-off" station, so to say. Both programmes shall start at 0900 UTC on the respective days. Reports are welcome at c/o B.P. 130, 92504 Rueil Cedex, France.

According to Anoraks UK, Rock Radio International, 105 Bushmills Road, Coleraine, Co. Londonderry, BT52 2BS, Northern Ireland, are now relaying the sole remaining Donegal pirate, Northside Radio (846 kHz) between 11.30 and 12.00 UTC on 6273 kHz.

The Scottish Free Radio Network's 48 metre band relay service will recommence very soon as we've been told by Jock Wilson of Radio Stella. Any station without a transmitter should contact him at 23 South Beechwood, Edinburgh, EH12 5YR, Scotland, for full details.

Activity magazine reports that Total Control Radio didn't appear in February after their transmission in mid-January, the problem still is a mains supply for the tx which should arrive shortly. It is possible that TCR will be active during the latter half of March on either 6200, 6233 or 6266 kHz. The address for that station is c/o B.P. 130, 92504 Rueil Cedex, France.

As mentioned in 145, Radio Wahnsinn (= Radio Insanity), a new German station, was heard with its first broadcast on March 5th, 1989 via Radio East Coast Holland on 6240 kHz. The next broadcast should take place in a month's time and will then feature disco oldies from the 70s & 80s. Listeners' requests and dedications are invited at the station's address which is Postfach 220342, D-5600 Wuppertal 22, West Germany.

73's

Radio Wahnsinn

RADIO-ACTIVITY ON SHORTWAVE!

Weekend Music Radio, 42 Arran Close, Cambridge, England, is planning to be back on Easter Monday with another broadcast on 48 & 19 metres including a one-hour German service hosted by Mike Hamilton and Josef Licher.

By the way, WMR has received some 120 letters for the Christmas/New Year broadcasts on 6315/7 & 15043 kHz which is the highest amount ever for the station for a series of broadcasts. Since the start of the tests to North America on 19 metres in October 1988, some 43 reports from across the Atlantic have found the way to the WMR maildrop!

W.F.R.L. Worldwide (Hunstanton address) inform us that they have moved frequency to 9922 kHz (ex-9970) on the 1st Saturday of the month, that channel shall be used for the time being but will switch off at around 1700 UTC. 11170 kHz is used every 2nd Saturday as before, additionally there will also be broadcasts on 25845 kHz.

The "QSL Magazine" is at the printers at the moment and should be ready soon, there are pictures of the DJs' plus fact files, a rundown on how the transmitters work etc. Further details on how to get a copy will be announced shortly as well.

WFRL are going to have a telephone number in operation as from March 12th on 6275 kHz for listeners to phone in! Take note that the station is on the air every 1st Sunday of the month on 7385 kHz as well as every 2nd Sunday on 6275 kHz apart from the high frequency broadcasts mentioned above!

World Mission Radio, P.O.Box 346, Corona, California, 91719, USA, now features Tom de Wit's popular "WMR Goes DX" programme three times each and every Saturday and Sunday (if the station is on the air, that is), at 0500, 1000 and 2200 UTC, for an hour.

Publications. Issue 25, the final one from Wavelength magazine is out now and costs 65p or 3 IRCs. We can certainly recommend this as unlike many other magazines, WL has stopped when reaching the peak. Wavelength, P.O.Box 5, Hunstanton, Norfolk, PE36 5AU, England.

Activity Magazine's issue 11 is now available with detailed information on the shortwave scene plus a look at the medium wave stations and an article on propagation by BRI's Roger Davis. Foreign readers please note that Dutch, French or West German stamps to the approximate value of 75p or 3 IRCs for a copy are accepted. Activity Magazine, 3 Greenway, Harold Park, Romford, Essex, RM3 0HH, England.

QUOTATION OF THE FORTNIGHT

During the broadcast on March 19th, 1989 on 7315 kHz, the operator of Radio Black Power apologized for his poor English which was because he only had one hour of English per week at school ! Now we all know what's wrong with the Dutch educational system !

Finally, some more remarks on the free radio activity over Easter this year :

Radio Waves Int'l transmitted under the name "World Communications Service" once again, R.W.I. seems to use that name whenever they are active over a festive season such as X-mas or Easter. Special QSL-cards are available for correct reports to the usual address.

The FRS-Holland transmissions on both Easter Sunday and Monday were a bit strange, ie. both broadcasts on 6202 and 6807 kHz were heavily overmodulated and apparently were unscheduled. This is a bit strange

as FRSH used to be heard with their regular programmes only. The txmsn on 6807 kHz seemed to be a repetition of the shows aired on 7314 kHz earlier that day.

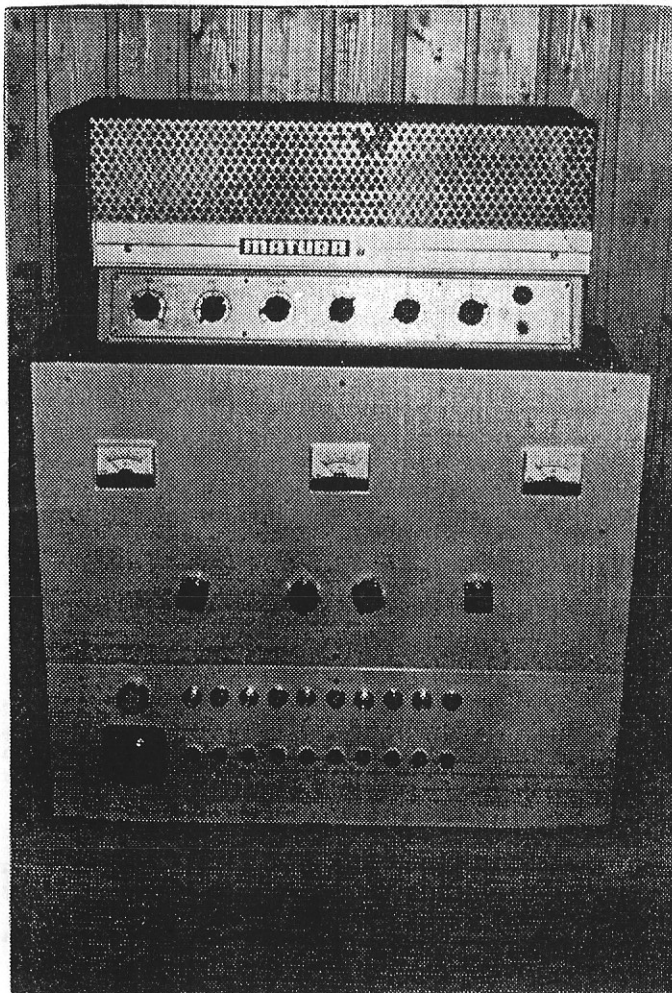

By the way, did you notice the amount of QSOs which were done on Easter Sunday in particular.

Rainbow Radio Germany seemed to be continuously calling cq over the weekend and were apparently on a marathon txmsn as they were even heard late at night as well as early in the morning.

A must for a QSO-lovers in case there are any ?!

The picture on this page shows the tx currently in use by Süd-West-Radio from Germany, this shot was taken in 1989.

Until we meet again 73s & FFRR !

radiotelex

Issue 147 / Vol. 6

March 27th, 1989

c/o Duempter /Warte 6, D-4100 Duisburg 12, West Germany.

Happy Easter everybody !

As you may have expected for this Easter issue, RT has become a logsheet rather than a newsletter this time again. Anyway, the number of stations on the air over Easter was quite satisfactory, particularly on Easter Sunday when there was always someone to be heard. Conditions have been ok all in all even though DX-reception was poor most of the time, on the other hand there was hardly any skip noted at all ! By the way, did you notice the Moegel-Dellinger fade-out on Easter Sunday approx. 1313-1325 UTC ?

Please note that the deadline for RT 148 will be on April 9th, 1988, with the line open for your logs & news between 1300 and 1600 UTC that day. If possible, don't phone in at earlier times as we also want to check the bands ourselves in order to get a general impression of who has been on the air !

Alright, without any further ado, let's begin with today's list of

UPD A T E R S

March 4th, 1989 (Saturday)

S-rate : -UK -CON-SCA-

6275	Delta Radio (UK)	1145	E	- ? -

The mailing address for the 4FWS/Swinging Radio England relays via Orion (yes, John England is still alive !) is P.O.Box 7, Venus, Texas, 76084, USA. QSLs are said to be available, by the way. 4FWS/SRE seems to get fairly regular airplay over Radio Orion on 6298 kHz though it was announced on March 19th that further programmes couldn't be aired at the moment as the tapes had not arrived yet.

The mysterious station reported on 6257 kHz with a programme in French in the "Weekly Report" by Anoraks UK March 11th, 1989 was most likely Radio Prague with an odd signal, usually in parallel with 6055 & 7345 kHz. Remember that Radio Prague has been heard with similar outlets on e.g. 6220 and 6228 kHz in the past. Why not try and QSL ? The address is Radio Prague, 12099 Prague 2, Czechoslovakia.

ATLANTA RADIO 10TH BIRTHDAY COMMEMORATIVE Q.S.L.

ATLANTA RADIO 10TH BIRTHDAY 22ND JANUARY 1989

QSL - BLACKLIST

station	freq	sent	report posted
Free Medway Town Radio	7490	2xRP	March 1988
RTR International	6208	2xRP	March 1988
Radio Cavendish	6235	2xRP	November 1987
R.Caroline 558	6210	2IRCs	March 1988
Radio Dublin	6930	2IRCs	February 1988
Superclan Radio	6204	IRC	October 1987
Flying Dutchman Radio	6200	SAE	June 1988
Radio Galaxy	6225	2xRP	April 1988
W.A.B.C.	6295	2IRCs	August 1988

As comment on the above list, RTR seems to be a difficult repplier, it sometimes takes a follow-up before you actually receive a letter back. Radio Dublin seems to have other problems these days rather than QSLing foreign listeners reports, so the chances to get a reply aren't that fantastic. Radio Galaxy apparently replied to most listeners' reports for the April 1988 broadcast just before the transmission on March 19th, 1989.

With the huge QSL-survey last time as well as our Blacklist in this issue we have cleared up our entire backlog of QSL-info, so if you have any news on stations' verification policy, let us know ! Even if we can't print your items immediately, you can be sure that we shall keep them for later publication.

Radio Gloria, a Scottish-based station which had been heard with a number of QSOs so far on 48 metres can be contacted at 23 South Beechwood, Edinburgh, EH12 5YR, Scotland. Gloria hopes to come up with some real programming shortly. The station uses a 30-watt-tx, QSLs are available.

Radio Karibu is proud to announce its official mailing address now which is c/o P.O.Box 82, 40101 Jyväskylä, Finland. Please don't send any mail intended for the station to the Bremen maildrop which was mentioned in a back issue of RT as Karibu only uses the Finnish address at the present time.

Radio Marabu (Wuppervalley & Utrecht maildrops) informed us that the station is going to resume its regular service which had to be suspended after the temporary closure of the Scottish Free Radio Network late last year. Marabu shall be on the air every 1st Sunday of the month between 0800 and 1000 UTC, the frequency will be most likely 6280 kHz. Listen out for RMI on April 2nd for the official reopening of the monthly service, your hosts will be station manager Mark Graison as well as Thierry with his French show "Contrastes". A new info-booklet and other promo material including new QSL-cards are also available!

RADIO MARABU

Postfach 220 342, D-5600 Wuppertal 22

Rainbow Radio Germany, c/o Postbus 65027, 3002 DA Rotterdam, Holland, has been quite active over the Easter weekend with a number of brief tests and QSOs on 6314 kHz. All transmissions were said to be live from a Belgian site with 20 watts of power.

According to Anoraks UK Rock Radio Int'l announced that they would only be broadcasting fortnightly from now on. This was said to be due to the extra time required to record programmes for a new FM service called Triangle Night Time Radio on 98.5 MHz which is to be broadcast across the North coast of Northern Ireland. Word from the operators informs us that problems with their SW signal bring re-broadcast through a local church's faulty P.A. system is causing another change of plan (and tx location) with the result that the station may be off the air for some time.

Radio Tower (Utrecht mailing address) will eventually be back with the 2nd Sunday schedule on 6240 kHz as described in RT 144.

Apart from that, we finally managed to figure out the correct new mailing address for W.L.R. which is c/o 21 Green Park, Bath, Avon, BA1 1HZ, England. The station seems to operate on a weekly basis on 6319 kHz at the moment with the usual format of free radio news & chat on radio-related topics. The signal over here in Germany has certainly become worse compared to the days when W.L.R. was part of the Scottish Free Radio Network, nonetheless, power is said to be 150 watts from a location somewhere in Scotland.

NEWS

Radio Action, Postbus 26, 7030 AA Wehl, Netherlands, which has been on the air twice on shortwave so far hopes to put out its next broadcast in June this year, again on Saturday. The station has used 6205 kHz so far with a tx power of about 60 watts, but power should be increased to 120 or even 180 watts in June. Action is also active with a Sunday morning verzoekplaten programma on 1260 kHz 1000-1300 hrs local time.

Easter 1989 was also anniversary time as Radio Caroline from the North Sea celebrated its 25th birthday on March 26th with a Top-1000 conutdown as well as special programmes which were also aired on 319 and 6215 kHz until lunchtime that day apart from the regular 558-channel. This was apparently done to give long distance listeners the chance to tune in, too. In any case, happy birthday, Radio Caroline !

An obviously new station which was first heard in QSO on Good Friday as well as with real programming on Easter Sunday is Radio Confusion Int'l. According to DJ Steve Midnight, RCI can be contacted at 32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England. The main frequency used so far is 6316 kHz.

After many years, Radio East Coast Commercial (Hunstanton address) put out a successful broadcast on 26 metres March 12th using 11515 kHz with approximately 12 watts of power. Listen out for further broadcasts on that band, probably in parallel with the usual 6815 kHz. Here's another shot of the RECC studio taken in early 1989 :

Radio International from Verona which was regularly reported on 1620 kHz earlier this year is said to have tested a new 5 kW tx. However, as they haven't been logged recently it seems as if they've reduced power again on that frequency?! Anyway, the 5 kW transmitter had already been used by another Italian station between 1979 and 1982. The new tx is located near the Garda Lake, on a mountain, some 1800 metres above sea level. Address: Corso Porta Palio 36, 37122 Verona, Italy.

Radio Italia Int'l is just a new name for the international service operated by well-known Italian station Radio Spoleto (c/f RT 146). Programmes are said to be broadcast daily on 7140 kHz 0700-1100 UTC with 1 kW of power. You can contact the station at Vicolo Volusio 1, 06049 Spoleto (PG), Italy.

Yet another station calling itself Radio Mi Amigo has appeared on 48 metres and was first noted on Saturday, March 18th. This station can be contacted at Postbus 85, 4527 ZH Sluis, Holland but is not connected with another station called Radio Nova which used the same address a few years ago. Mi Amigo's main channel is 6296 kHz.

Starfleet Radio, c/o Postbus 19074, 3501 DB Utrecht, Holland, plans to be back with another broadcast in a couple of weeks' time, on Sunday, April 23rd, 1989 at 0800 UTC. The frequency will be most likely 6240 kHz which should be the station's primary choice in future. The DJ line-up includes Norman Walker, Jonathan Dee and Mike Ef (ex-Radio Batida). By the way, Starfleet has suspended all relays for the time being.

Radio Tower (Utrecht address) resumed its regular 2nd Sunday broadcasts today on 6240 kHz including programmes in German and Swedish, the latter presented by Carl Andersson. The proposed broadcast on 19 metres (approx. 15642 kHz) had to be postponed due to problems with the aerial. Additionally, the telex transmissions have been "put into the fridge" as the technical problems should be solved first.

UK Radio/"Hot Hits" which was mentioned in RT 147's loglist can be reached through P.O.Box 1280, Rednall, Birmingham, B45 8SG, England. The transmissions on 6289 & 6815 kHz over Easter were apparently relayed by Radio Orion. UK Radio is a local pirate station and is usually active on FM and AM only.

Issue 148 / Vol. 6

April 9th, 1989

c/o Duesmpter Strasse 6, D-4100 Duisburg 12, West Germany.

Dear free radio fans,

here we are back again with another 4-page-issue for a change even though regular subscribers to this magazine will find our new address list enclosed this time. Actually, there isn't a lot to report on these days as the bands were more or less quiet over the last couple of weeks. Conditions have been more or less the same as last time with short skips on both 48 & 41 metres, in fact there seems to be the tendency to use 7 MHz more during the summer months.

However, when there's little to hear literally every piece of information is most valuable to us! Thanks a lot to all contributors to this issue. As usual deadline for RT 149 will be in two week's time on April 23rd, 1989. Please write in or phone us, we'd like to hear from you! Before we forget, special credits to the French DX-magazine "A l'ecoute du Monde" from which several items were taken!

Radio Orion was heard with several odd outlets on April 2nd, frequencies observed in the UK include 6279, 6289 and 6309 kHz, all 10 or 20 kHz above or below the regular channel of 6299 kHz. The Voice of the Netherlands mentioned that they had been on a marathon broadcast on 7490 kHz April 9th with a 7½-hour-broadcast, ie. the transmission started at 0300 UTC !

Britain Radio International (Utrecht & Salisbury addresses) were logged again this morning with another test broadcast on 6232 kHz. It was announced that regular programming would resume on April 23rd, probably again on 6232 kHz (alternate channels are 6225 and 6240 kHz), starting at 0900 UTC. BRI intends to be on the air every 2nd & 4th Sunday of the month according to their previous schedule.

Radio Indigo, c/o Postbus 19074, 3501 DB Utrecht, Holland, now have their own transmitter. However, they weren't able to use it on Boxing Day as was originally promised. They are still looking for a safe place outside the Netherlands to hide the tx. If no place is to be found, Indigo may be relayed by one of their powerful colleagues from Holland.

Radio Mandarine is a new station which doesn't have an own transmitter but plans to be relayed later this year on 41 metres. You can contact the station at Postbus 19074, 3501 DB Utrecht, Holland.

Veteran medium wave pirate Radio Orang Utan has announced that its next broadcast should take place on May 13th/14th on 1508 kHz & 186 metres (probably not in parallel but first on the latter band in order to change to 1508 later on). Reception reports & bananas please to Postbus 114, 7040 AC s'Heerenberg, Netherlands.

As a f/up to an item in RT 146, the Scottish Free Radio Network will soon be accepting relays on their new 41 metre transmitter. Any station interested should write to Jock Wilson, 23 South Beechwood, Edinburgh 12, Scotland for further details such as cost, frequency and time available.

Underground Sound is the new name of famous Irish station Westside Radio. After the official closure of WRI last year, Underground Sound continues to transmit every Sunday on 6870 kHz between 1000 and 1100 UTC. Programmes often include tapes of Irish stations. No mailing address is known for this station yet.

Yet another new German-based station which made its first transmission today on 7309 kHz is Radio Vanessa (Wuppertal address). The DJ's name is Michael Scott who told listeners several hundred times during the 1-hour-programme that reports are welcome, so write in !

Radio Wahnsinn (Wuppertal-address) has received some 19 reports for its first broadcast in March and should be back on the 1st Sunday of May on 48 metres. In future, the station hopes to be on the air every two months. The next programme will include half an hour of "heavy music" as well as another 30 minutes of disco oldies.

Radio Waves International, B.P. 130, 92504 Rueil Cedex, France, won't be on the air during the last weekend in April as well as most of May as the operator will be on holidays then. However, some taped programmes will be relayed by Radio Luce on 7374 kHz. The W.C.S. broadcasts on 6225 & 7440 kHz over Easter appear to have been quite successful according to the number of letters received.

DSWCI's "Shortwave News" 4/89 report that US pirate WJDI is about to test to Europe with a tx power of some 1500 watts (!). No frequency or date is known but it may be a good idea to scan the bands on Saturday evenings from 2200 UTC onwards. The address is P.O. Box 142, Coatekill, NY 12419, USA.

Publications. Peter Messingfeld has issued a German language 32-page A5 booklet called "Offshore Radio 1987-1989" with various articles on the offshore stations active during that period as well as satellite Radio Nova. The publication contains some 18 photos and is excellent value. The booklet is a bit expensive but nonetheless highly recommended for everyone who has an interest in offshore radio. Send DM 12,50 for a copy to Offshore Spezialversand, Postfach 100926, D-4040 Neuss 1, West Germany.

That's it once again except to say sorry for some MW logs which weren't included in this issue due to lack of space. Please note that we shall only print medium wave stations' QSO logs if we have nothing else to report on as this magazine mainly deals with "international" Free Radio. Anyway keep on listening & 73s from R A D I O T E L E X

radiotelex

Issue 149 / Vol. 6

April 23rd, 1989

c/o Duempter Stra3e 6, D-4100 Duisburg 12, West Germany.

Yes indeed !

Welcome to another Telex full of logs & news thanks to your kind support. Before we start, however, may we already remind you that deadline for RT 150 will be on Sunday, May 5th, 1989; the phone line will be open again on that date between approximately 1300 & 1600 hrs UTC. By the way, don't forget to check out for pirates on both May 1st (Lebers Day) and May 4th (Heavendrive) which are both public holidays in this country and probably elsewhere, too !

NEWS DESK

Radio Caroline is reported to look for a new frequency for its shortwave outlet as a French utility station has complaint about the use of 6215 kHz as was mentioned in Radio Netherlands' "Media Network" programme on April 13th.

A new German station which was first heard today is Radio Chaos (Nomen est omen, -ed) who were relayed by Radio California on 6282 kHz. DJ Willy announced that letters for him should be sent through R.California (!), Postfach 220342, D-5600 Wuppertal 22, West Germany.

According to Anoraks UK, the DTI raided one of the three Coast FM tx locations in Hastings on Easter Sunday. As a result, the FM relays from Eastbourne and Brighton as well as the shortwave relay on 6235 kHz went off the air, too. Later in the afternoon, the 118 Kingfisher Drive-mailing address was also visited by the DTI. Please note that this address is now closed for all free radio stations !

Radio Dublin is still active almost daily on FM 101 MHz only but hopes to resume its shortwave outlet on 6910 kHz within the next few weeks. Anoraks UK report that the tx power may not be as high as before but should be in the region of several hundred watts.

Radio East Coast Holland is going to broadcast on 41 metres only in future with 200 watts of power. Listen out on 7280 or between 7360 and 7380 kHz for them ! By the way, sister station VOTN which uses 7490 kHz is running about 175 watts.

Fox Radio which was first heard on Easter Sunday will soon be active again on 6309 kHz. The address for this station is Postbus 65, 7260 AB Ruurlo, Netherlands. "Fox on the run" might be a good theme tune for that station ?!

Radio Laser International which were first heard April 23rd can be contacted at c/o RTR, P.O.Box 140, Ashford, Kent, England. Laser seem to be broadcasting every Sunday on 6235 kHz between 1000 and 1200 UTC.

Radio Orion, P.O.Box 1280, Rednall, Birmingham, B45 8SG, England, hope to test on 11 metres during the end of summer this year. By the way, there were no Swinging R. (John) England tapes to be heard via Orion today because they failed to arrive in time.

Rainbow Radio Germany, c/o Postbus 65027, 3002 DA Rotterdam, Holland, intend to transmit once again next weekend, probably on Sunday starting at 0900 UTC. A couple of frequencies were mentioned for that broadcast, 7240 and 7484 kHz are the ones to check out !

Rock Radio Int'l, Northern Ireland's only free radio station on shortwave invites stations interested in relays to contact Andy Craig, 105 Bushmills Road, Coleraine, Co. Londonderry, BT52 2BS, Northern Ireland. The station offers "cheap rates" as well as an "excellent transmitter". Rock Radio itself hasn't been heard for a while, probably due to site problems. The frequency used so far is 6273 kHz.

Star International, 231 Loose Road, Maidstone, Kent, ME15 7DR, England, informs us that the station now has resumed its relays via the SFRN on 6319 kHz. Star has also been heard recently over Radio Waves Int'l on 7440 kHz and will probably continue via RWI in future.

Sunshine Radio, 58 Rue Victor Hugo, 31800 Saint Gaudens, France, should put out its 4th transmission by the end of June, probably on 7125 kHz again. Sunshine plays "Californian" music, similar to US FM networks such as "The Wave" along with IDs in French and English. So far, the station has received 10-15 reports, all from Italy and France only. Sunshine uses a 65-watt-tx connected to a 45 metre long wire, QSL-cards are available in three different colours (happy hunting !).

During his broadcast on 7373 kHz April 23rd the operator of Union Radio, Postbus 589, 7900 AN Hoogeveen, Holland, announced that this would be his last appearance on shortwave for the time being because he was going to marry the following week.

As a follow-up to our item on US-pirate WJDI, we can now tell you that the frequency used for tests to Europe should be around 15045 kHz from 2200 UTC onwards (c/f RT 149). By the way, it might be a good idea to check frequencies below the official 19 metre broadcasting band over the next weekend, too.

Finally, a rather interesting piece of news as the UNID station logged on 6225 & 6273 kHz on Easter Monday, March 27th has been identified as a new German station called Radio Zanzibar with test transmissions. You can expect further broadcasts on the two frequencies just mentioned shortly. The mailing address is Radio Zanzibar, Postfach 220342, D-5600 Wuppertal 22, West Germany. Believe it or not, there are even German stations who operate an own transmitter !!

Once again, here's some information on a DX-meeting, this time the 17th international SWLCS DX-camp which will take place in Merchweiler/Saar from July 7th until July 9th. You may expect a number of free radio listeners there, remember last year the German FR Corporation recorded a programme there. Further details are available from SWLCS, Postfach 1170, D-6688 Illingen, West Germany.

Believe it or not, this issue contains 1945 words ! 73s & FFFR from RT

radiotelex

Issue 150 / Vol. 6

May 7th, 1989

c/o Dvempter Waarse 6, D-4100 Duisburg 12, West Germany.

Dear radio freaks,

despite poor conditions and relatively little activity on the bands, we're glad to present another rather full logbook as well as an extensive news section... well, here ends the commercial. Nonetheless, thanks a lot for all your contributions ! Deadline for RT 151 will be (guess what !) in two weeks' time, on May 21st, 1989. Logs by phone are requested to be rung in between 1300 and 1600 UTC on that day.

Some of the SFRN programming is currently running in parallel on both channels, 6319 & 7314 kHz. Besides, John Dean of W.L.R. told that he was responsible for playing all those Caroline/offshore recordings recently heard on 6319 kHz because he had no other programmes to put on the air.

NEWS

RADIO CALIFORNIA
INTERNATIONAL
P.O. BOX 22 03 42
D-5600 WUPPERTAL 22
WEST-GERMANY
MUSIC POWER FOR EUROPE

News has reached us from Britain Radio Int'l (Salisbury & Utrecht addresses) that full programming was resumed April 23rd which means that BRI should be back every 2nd & 4th Sunday of the month on around 6230 kHz. The station will introduce a new programme this month called "The Radio Tapes" which features documentary tapes on offshore & landbased free radio, this programme should be aired on every 4th Sunday between 0900 and 0930 UTC in order to replace the German service put out at that time so far. There might, however, be some further German shows on BRI on special occasions in future! By the way, BRI will be celebrating its 9th anniversary on June 11th with a number of special features.

Radio California (Wuppertal address) is going to take a break, the next broadcast should take place towards the end of June. Listen out for another new German station called Star Club Radio which may be put on the air then and whose music policy is to play mainly golden oldies. Star Club Radio hopes to transmit with an own rig later on (c/f RT 145).

Radio CLCG, c/o Postfach 540101, D-4100 Duisburg 11, West Germany, returned to the airwaves after a break of some six months due to problems with finding a suitable relay. The station hopes to continue with more or less regular broadcasts about every two months via VOTN on 7490 kHz.

According to RECC, a statio called Radio Freedom should have been active on 6253 kHz today, but no logs have come forward for this station yet. Any further info would be much appreciated.

The Free Radio Service Holland (Dedemsvaart-address) told us that the broadcasts heard over Easter on 6202 & 6807 kHz did not emanate from any FRSH relay transmitter. Particularly the transmission on 6807 kHz is assumed to have been an unofficial off/air replay of the FRSH programmes aired on 7315 kHz Easter Sunday.

RADIOTELEX

470 Bremer Straße 6, D-4100 Duisburg 12, West Germany.

RADIOTELEX ist DAS Magazin für Freies Radio auf Kurzweile für alle, die aktuell und umfassend über die neuesten Ereignisse aus der Welt der Freien Radiostationen (Piratensender) auf Kurzweile informiert werden wollen !

RADIOTELEX erscheint seit nummehr sechs Jahren alle 14 Tage neu in englischer Sprache und hat es auf immerhin 150 Ausgaben gebracht. Damit ist RADIOTELEX mittlerweile zum kontinuierlichsten Magazin in diesem Medienbereich geworden.

Jede Ausgabe von RADIOTELEX enthält auf 4 bis 8 Seiten (je nach vorhandenem Material) die Logs und Nachrichten der letzten zwei Wochen.

Redaktionsschluß ist der jeweilige Sonntag um 1800 Uhr MESZ, so daß die Logs und News der vergangenen Stunden noch telefonisch durchgegeben werden können ! Dabei kann die Redaktion auf feste "Empfangsbeobachter" in England und Skandinavien zurückgreifen, so daß ein umfassendes Bild der jeweiligen Empfangsbedingungen zustande kommt. Zwischen Redaktionsschluß und Versand liegen dann weniger als 24 Stunden. DIESE TATSACHEN MACHEN RADIOTELEX ZUM AKTUELLSTEN KURZWEILENMAGAZIN, DAS SICH DERZEIT IM UMLAUF BEFINDET !

Hierfür spricht auch, daß nahezu alle namhaften KW-Stationen Abonnenten von RADIOTELEX sind.

Selbstverständlich ist es möglich, RADIOTELEX zu abonnieren. Die wichtigsten Abgebühren sind wie folgt:

Bundesrepublik Deutschl.	DM 25,-	/	DM 35,-
Holland	hfl 35	/	hfl 40
Schweiz	SF 25	/	SF 30

Weitere Kurse auf Anfrage !

Für alle, die sich ein näheres Bild von RADIOTELEX machen wollen, befinden sich auf der Rückseite dieses Informationszettels zwei Seiten der aktuellen RADIOTELEX-Ausgabe Nummer 150.

Alle weiteren Tage neu

Some of the SFRN programming is currently running in parallel on both channels, 6319 & 7314 kHz. Besides, John Dean of W.L.R. told that he was responsible for playing all those Caroline/offshore recordings recently heard on 6319 kHz because he had no other programmes to put on the air.

NEWS

RADIO CALIFORNIA
INTERNATIONAL
P.O. BOX 22 03 42
D-5600 WUPPERTAL 22
WEST-GERMANY
MUSIC POWER FOR EUROPE

News has reached us from Britain Radio Int'l (Salisbury & Utrecht addresses) that full programming was resumed April 23rd which means that BRI should be back every 2nd & 4th Sunday of the month on around 6230 kHz. The station will introduce a new programme this month called "The Radio Tapes" which features documentary tapes on offshore & landbased free radio, this programme should be aired on every 4th Sunday between 0900 and 0930 UTC in order to replace the German service put out at that time so far. There might, however, be some further German shows on BRI on special occasions in future! By the way, BRI will be celebrating its 9th anniversary on June 11th with a number of special features.

Radio California (Wuppertal address) is going to take a break, the next broadcast should take place towards the end of June. Listen out for another new German station called Star Club Radio which may be put on the air then and whose music policy is to play mainly golden oldies. Star Club Radio hopes to transmit with an own rig later on (c/f RT 145).

Radio CLCG, c/o Postfach 540101, D-4100 Duisburg 11, West Germany, returned to the airwaves after a break of some six months due to problems with finding a suitable relay. The station hopes to continue with more or less regular broadcasts about every two months via VOTN on 7490 kHz.

According to RECC, a statio called Radio Freedom should have been active on 6253 kHz today, but no logs have come forward for this station yet. Any further info would be much appreciated.

The Free Radio Service Holland (Dedemsvaart-address) told us that the broadcasts heard over Easter on 6202 & 6807 kHz did not emanate from any FRSH relay transmitter. Particularly the transmission on 6807 kHz is assumed to have been an unofficial off/air replay of the FRSH programmes aired on 7315 kHz Easter Sunday.

May 7th, Radio Meteor (c/o P.O.Box 41, 7700 AA Deemsvaart, Holland and P.O.Box 82, 40101 Jyväskylä, Finland) put out a test broadcast on two frequencies simultaneously, on 7370 kHz and 11582 kHz between 0805 and 0840 UTC. Power used was 60 watts on 26 metres and 10 watts on 41 metres.

Right Wing Radio, another Finnish operation which was raided last year during a broadcast on FM will be having its court case on June 2nd. Good luck !

Steve Collins of Total Control Radio tells us that on Friday, May 26th, 1989 both TCR and another UK-based station Radio Confusion are going to do a nighttime transmission between 2300 and 0000 UTC. It is planned to be a cooperative broadcast with one station doing about half an hour of programming and then passing it on to the other one for the second half an hour. The choice of frequencies will depend on the clearest channel available on 48 metres at the time. Listeners mail is most welcome and should be sent to either Total Control Radio, c/o B.P. 130, 92504 Rueil Cedex, France or Radio Confusion, 32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England.

After being absent from shortwave for about 7 months, Radio 101, P.O.Box 2, 4680 Gemmenich, Belgium, returned over the whitsuntide weekend. 7444 and 15015 kHz were noted, the latter frequency should be used for a weekly Sunday morning service 0800 - 1000 UTC which was expected to resume by now. However, no sign of 101 was noted on that channel today.

Finally, keep in mind that deadline for RT 152 will be (what a surprise !) in two weeks' time, on Sunday, June 4th, 1989. Our lines will be open again that day between 1300 and 1600 UTC for your logs, news & queries, so why not give us a ring. 73s & FFFR from RT !

ADVERTS

Skanneri, Finland's only DX-publication with news about free radio stations invites European SW/MW pirates to send in the story of their station (in English, Swedish or Finnish, one A4 size page only) along with QSLs/photos/logos of the station in question. Skanneri will publish these articles in a special series, so this might be YOUR chance to get more publicity among the Finnish audience. Skanneri, Box 82, 40101 Jyväskylä, Finland is the address.

For sale. Dressler ara-30 active antenna, hardly used, excellent condition, DM 300. Enquiries to RT, Box 151 please.

Issue 151 / Vol. 6

May 21st, 1989

c/o Duesmpter Strasse 6, D-4100 Duisburg 12, West Germany.

Hi there,

we're afraid this issue is probably one of those with little news content due to the fact that there are only very few events happening at the present time in the world of Free Radio. Well, let's take this opportunity to answer a couple of general questions often asked by our readers.

Sorry but we usually cannot backdate subscriptions to RT, we only have a few odd copies left of each edition. Anyway, if you're looking for a particular issue, please drop us a line, perhaps we can help you nonetheless !

The SAE-service is very likely not to be relaunched in future, but we're pleased to tell you that there are two colleague organisations that offer mint stamps from abroad, Anoraks UK (British & Irish stamps) as well as PIN-Magazine (British, Irish, Dutch and French stamps). Please contact them for further info.

NEWS

Radio Claymore (Wuppertal-address) informed us that the station is now a division of the newly formed Claymore International Radio Society which consists of several groups of people from different backgrounds with one common interest, to promote cultural activities, folk and blues music in particular. Apart from further transmissions on Radio Claymore there are plans for cooperation with some FM free radio stations as well as folk clubs and pubs known for their engagement in small stage performance. One of the projects lined up is the organisation of open-air folk concerts which will be taped and transmitted on shortwave !

Radio Marabu (Wuppertal & Utrecht addresses) will be shifting its regular monthly service on 48 metres to the 2nd Sunday, 0700 - 0900 UTC on 6225 kHz. The next broadcast is scheduled for June 11th and should include another Dutch service hosted by Kees Snijders.

Starfleet Radio

FM / MW / SW

NEWS

Radio Apollo Int'l, c/o P.O.Box 5, Hunstanton, Norfolk, PE36 5AU, England, hopes to be back on the air late June or early July, the frequency should probably be 6285 kHz.

Listen out for Britain Radio International's 9th birthday broadcast next Sunday, June 11th on 6230 kHz.

Canzoni Radio informs us that the station is about to commence regular broadcasts on 48 metres by mid June. The following schedule should be in operation every 1st & 3rd Sunday of the month:

07.00 Nonstop music
07.45 Soul Time - Pirate Andy (1st Sun) / Freddy Stone (3rd Sun)
08.30 Fun Station - pop music presented by Mikel Daisy
09.15 Rock Memories - solid gold with Freddy Stone
10.00 High Noon music show (live)
10.45 Hard 'n' Heavy - Mick Aro (1st Sun) / Gerhard (3rd Sun)
11.30 Mailbag show
12.15 News Show "live and in German"
12.30 close down

Besides, there will be relays or special shows to be heard on the remaining Sundays of the month. Canzoni can now be contacted again at Postfach 1225, D-4354 Datteln, West Germany. Apart from this, an address of Postfach 1226, D-5107 Simmerath, West Germany has also been announced on the air.

Cruisin' Solid Gold, one of the stations regularly to be heard over the SFRN transmitters, now uses the same address as W.L.R. which is 21 Green Park, Bath, Avon, BA1 1HZ, England.

The British based Delta Radio (Hunstanton maildrop) is temporarily off the air due to Pete Edwards being involved in a car crash.

Radio Dublin returned to shortwave on Tuesday, May 30th using 6910/2 kHz with just 40 watts of power. Poor signals have already been noted here in Germany.

Sunday, May 21st Radio East Coast Commercial decided to join the tape relay operator club (!) with an old Kelly Brown/KBSJ programme and an old Norman Nelson/Delta Radio tape followed by an old RECC off/air recording from Boxing Day. Reports for this broadcast should all be sent to RECC, c/o Hunstanton-address. By the way, there was no RECC broadcast on 11515 kHz May 7th, so the station logged must have been another one!

K.C.T. which stands for Krissie's Classic Tracks has been heard for the first time through the SFRN on 6319 & 7435 kHz May 21st, an address of 23 South Beechwood, Edinburgh, EH12 5YR, Scotland was given out.

The broadcast logged on 6273 kHz May 21st was a direct relay of Triangle Radio which broadcasts to Northern Ireland on FM 98.5 MHz. The "Night Time" tag has been dropped as the station has now extended its broadcast from Saturday night until 15.00 UTC Sunday afternoon. "TNR" was still used as ID though.

The Voice of the Netherlands should also be back in 2-3 weeks' time on 7490 kHz. Meanwhile, a Saturday nighttime broadcast on June 3rd using 6315 kHz was advertised, did anyone hear this transmission?

Issue 152 / Vol. 1

June 4th, 1989

c/o Duempter Strasse 6, D-4100 Duisburg 12, West Germany.

Dear friends,

a very brief editorial this time again due to a huge amount of news and loggings in spite of rather weird conditions at the moment. Thanks a lot for your kind support, deadline for RT 153 will be June 13th, 1989. Well, let's start off with the hard facts straightaway ...

Issue 153 / Vol. 6

June 18th, 1989

c/o Duempler / Marie G. D-4100 Duisburg 12, West Germany.

Hello everyone,

just as some sort of summer special here's another 8-page-edition of this magazine, there have been quite a lot of events worth mentioning at the news front. This may again be a bit surprising because the amount of stations audible each Sunday still is not what it used to be. Apart from that, conditions continue to be rather strange with long and short skips changing quite frequently. Before we dive into the logs, thanks a lot to all contributors to this issue. However, just recently the amount of participation has left much to be desired, if there weren't a few regular callers the logbook would become very short indeed !

The UNID heard on 7280 kHz May 28th at 0906 UTC (c/f RT 152) has turned out to be Radio Universum from West Germany with a test transmission. The station also ran some QSOs with Radio Laser as well as the Voice of the Netherlands on 6282 kHz.

The signals heard on 11515 kHz heard by several reporters which didn't emanate from Radio East Coast Commercial were apparently an outlet of Radio Beijing audible on this channel during the morning. What a difference that is after all !

Radio 48 (UK)	6280	31	SAE	QSL-card, letter

Here's a list of countries Radio Titanic Int'l received reception reports from between 1975 and December 1988, 758 reports all in all :
West Germany 302 / East Germany 179 / Sweden 87 / United Kingdom 100 (incl. one from Northern Ireland) / France 14 / Netherlands 11 / Norway 11 / Channel Islands 9 / Denmark 7 / Finland 7 / Austria 7 / Switzerland 6 / Italy 5 / Ireland 3 / Czechoslovakia 3 / Belgium 3 / Spain 1 plus one report each from the USA and New Zealand for RTI's overseas relays there.

That's it for this time, we shall be back again in a couple of weeks with RT issue 154. In other words, the next deadline will be on Sunday, July 2nd, 1989. Logs and news can be phoned in on that day between 1230 and 1600 hrs UTC. Please give us a ring or drop us a line, remember that it's YOU who can make this magazine as up to date as you want !

73s & FFFR from R A D I O T E L E X

Radio 101 hopes to improve reception of its 19-metre-outlet by July, the station currently produces poor signals on approx. 15020 kHz every Sunday. The tx power at the moment is 50 watts fed into a dipole 10 mts above the ground. An output power of around 200 watts should be reached later on. New QSL-cards are available which are the tiniest ever seen, they are as "large" as this Able-Label-sticker...

UKW 101 / 101.5 / 104.2 MHz
Kurzweile 7360 kHz

A mystery station was heard Friday night, June 9th at 2350 UTC on 4810 kHz with announcements in English. A celebration transmission for some sort of anniversary was mentioned on the air, there was also a telephone number mentioned for calls to the station. Maybe somebody else heard this and got any IDs (perhaps it was Radio Orion) ??

Finally in this news section, we have been told that the Dedemsvaart mailing address seems to be rather unreliable at the present time, so listeners should please remain patient if a reply from a station using that maildrop takes longer than usual. New stations looking for an address are advised to check out alternative facilities ...

France's 4500 reader DX publication "A l'ecoute du Monde" includes every two months news about the world of Free Radio. Stations which would like to become better known in the French speaking free radio scene are invited to send news, info-sheets and photos (which cannot be returned) to the editor Francis Mougenez, 2 Rue Neuve, 54800 Jeandelize, France. A sample copy of this all French, A4 size, 40 page magazine costs 5 IRCs and can be obtained from the above address.

"The Pirate Pages" is the name of a new bulletin which deals with pirate radio in the USA. It is published about every two weeks and contains logs and news, mainly from the shortwave stations audible there. European stations which are going to test to North America are asked to send their info to the mag for advance publication. A sample issue should cost 2 IRCs from 3007R 4th Avenue, Beaver Falls, PA 15010, USA.

Michel Ravigneaux, 21 Rue de la Chatterie, Hannogne Saint Martin, 08160 Flize, France, offers a number of computer printed lists for radio listeners. The "French Free Radio List" is a directory of around 2200 stations active in France (85 FF), the "List of Radio France stations" includes all stations operated by the French official home service (25 FF). There is also a "List of Pirate stations" available which gives details on all stations from the hobby scene on short and medium wave (60 FF). Prices include postage within Europe, for further details write to the above address.

N E W S D E S K

Here are a couple of corrections with regards to the schedule of Canzoni Radio we printed last time; the programme aired at 1000 UTC is called the "Telstar show" and is presented by Stefan. The name of the DJ who hosts the "Hard 'n' Heavy" programme every 3rd Sunday of the month is Gerd (and not Gerhard). The station's only official mailing address is c/o Postfach 1225, 4354 Datteln, West Germany ! At the moment, Canzoni is still testing in order to improve both the antenna and modulation quality. Listeners reports are most welcome, the main frequency is 6282 kHz (alt.: 6320 kHz). An FM-servicve is also in preparation.

Radio CLCG plans to have another "CLCG International" programme aired next Sunday, June 25th on 7490 kHz starting at 0900 UTC. The show is in both Dutch and English, the DJ is Steve Young. Reports are welcome at Postfach 540101, D-4100 Duisburg 11, West Germany.

Radio East Coast Commercial (Hunstanton address) would like to point out that the station still has very strong views regarding relays and QSOs, the programmes aired on May 21st were another attempt to show RECC's attitude towards this subject.

During the broadcast on May 28th, Radio East Coast Holland mentioned that 7360 kHz would now be the station's fixed frequency. RECH should be back in 2-3 weeks with another broadcast which should now take place quite soon.

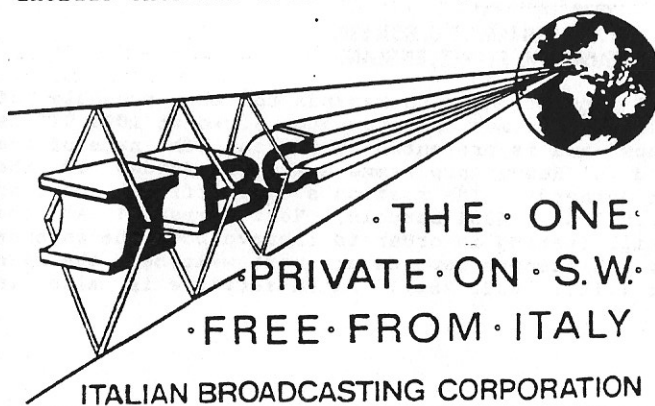

We received a letter from Alex Bertini, the operator of Radio Europe from Milano, Italy. Unfortunately, as the letter was entirely in Italian we couldn't understand it all but we managed to figure out the station's current schedule which reads as follows:
08.00 - 12.00 UTC on 7295 kHz (Mon/Sat/Sun) or on 27827 kHz (Tue/Wed/Thu/Fri). Programmes include tapes of US stations (including WYFR !) plus own music and DX shows in Italian and English. A reprint of the full schedule can be found later on in this magazine ! The station's address meanwhile is c/o Play-DX, Via Davanzati 8, 20158 Milano, Italy.

The mailing address for RFM - Short Wave which was logged on 6317 kHz June 11th is 105 Newport Road, Leyton, London, E10 6PH, England.

After a long time of inactivity, Radio Freedom Int'l from Scotland was noted again on June 4th using 6250 kHz. The following address was given out which looks almost completely like the old one used until 1984, Dept. R., 37 Elm Row, Edinburgh, EH7 4AQ, Scotland.

Jolly Roger Radio, P.O.Box 39, Waterford, Eire now has a series of 6 super colour photo QSL-cards. The station is active about every Sunday on 6229 kHz and has also been relayed by R.Waves Int'l on 7440 kHz.

Here's some information supplied by Radio Mandarine, Postbus 19074, 3501 DB Utrecht, Holland which is a new station whose first programme will probably be relayed by a "European powerhouse". In future there will be two different services, a continental one in English & French carried by low power relay stations such as RWI as well as a British service in English only and relayed by stations such as Jolly Roger R. The station's music policy will be varied from oldies, album tracks towards alternative, unknown or funny music, the first show should include extracts from the "Dirty Dancing" soundtrack !

Radio Orion has been heard with tests on 25995 kHz Sunday afternoon in addition to its regular broadcasts on 48/44 metres.

Rainbow Radio Germany plan to run a nighttime broadcast on Saturday, July 1st. The programme should start at 2200 UTC, 6315 kHz should be used then. Postbus 65027, 3002 DA Rotterdam, Holland is the address.

Since 1983, Right Wing Radio was the first Finnish pirate in court, the hearing took place on June 2nd, 1989. Only two members of RWR were prosecuted; the main operator was fined 650 DM for using a tx without licence, the other operator has to pay 400 DM fine for the same reason. All equipment confiscated won't be returned including a tx, stereocoder, car batteries, CB gear, two bags and even a snow pulka. This adds to a loss of over 1500 DM which is why RWR believes the sentence was unfair. Anyway, the station will be back soon, at least on shortwave ! The Wuppertal maildrop is still in use.

Well informed sources told that Jay Burkette has lost all interest in shortwave broadcasting and that Spectrum Leisure Communication no longer exists. The former SLC mailing address of BM Broadcasting, London WC1N 3XX, England is still available for contacting the GRQ Electronics equipment company.

Süd-West-Radio, c/o Postfach 1243, D-6685 Schiffweiler, West Germany, have not yet been active this year due to lack of interest and time. In the meantime, however, a new 60-watt-tx has been constructed which can be run from a car battery. There may be a brief test transmission in the near future, so listen out !

During their QSO with R.Tonair, Radio Torenvalk, Postbus 94, Zedam, Netherlands, told listeners that the station hopes to bring back regular programmes (as opposed to QSOs -ed) during the summer on 48 metres.

Another Dutch operation, Radio Tower (Utrecht address) announced a test transmission to take place on 9912 kHz today after s/off on 6240 kHz. There had been no broadcast on the regular 2nd Sunday this month due to various problems.

Address D-76 Offenbach, P.O. Box 1823

During his holiday on the South East coast of France, Peter Hills of Radio Waves Int'l broke his right leg. He hopes this incident won't interfere too much with his activities for RWI, there may only be delays in replying to mail sent to BP 130, 92504 Rueil Cedex, France. Well, all the best for a speedy recovery from this place ! By the way, did you note that RWI's signal on 7441 kHz is much weaker compared to the transmissions before the station's holidays in May ?

Surprise, surprise ! Today, Prince-Terry's Westside Radio made its official comeback to shortwave on 6280 kHz after being active for several months under the name "Underground Sound" on 5870 kHz. No address was heard during today's broadcast.

One of the most regular stations around these days, Radio East Coast Commercial (Hunstanton address) says its 26 mb tx is currently off the air due to QRM with the Radio Beijing outlet on 11515 kHz. The service may return later but no final decision has been taken yet. The programme logged on 6815 kHz June 18th was a Sounds Alternative tape put out by RECC in order to test the modulation & audio sound. Did it sound alternatively then, we wonder.

Error Dept. Please note that the correct mailing address of Radio Freedom International from Scotland reads as follows: Dept. R., 67 Elm Row, Edinburgh, EH7 4AQ, Scotland (not 37 Elm Row) as was printed in RT 153. Sorry !

Here are a few DX logs from Italian stations as listed in "Play-DX" issue 553 :

Radio Antenna 2000, Pavullo Nel Frigano, Modena was heard on 1512 kHz at 2300 UTC.

Radio San Luchino from Bologna was noted on 1584 kHz at 0500 UTC.

Last not least two very strange UNID European pirates were received at around 2315 UTC on 3245 and 3284.5 kHz !

Now over to some unpleasant news regarding Radio Laser Int'l, P.O.Box 140, Ashford, Kent, England. RLI was raided by the British radio investigation service on Sunday, June 18th at 11.10 am. The station was back, however, on June 25th for a brief spell using a borrowed transmitter. It appears the 14-watt-tx used before was confiscated and the operator caught. According to Mike Williams, Laser will have to close now for about 8-10 weeks while legal action pending takes its course.

Radio Meteor, c/o FRCF, P.O.Box 82, 40101 Jyväskylä, Finland, plans to put out more test broadcasts on 26 metres during July, starting at 0800 UTC within the frequency range of 11560-11582 kHz. Meteor was also logged on 6275 kHz this morning, by the way.

Back to Germany, Radio Vanessa (Wuppertal maildrop) recently replied to all mail sent for their first broadcast in April. The station hopes to be on the air about once a month using various relay facilities. If all goes well, an own tx may be used some time next summer, QSL-cards should also be available in future.

Finally a note from 4IFR - New Zealand (c/o B.P. 130, 92504 Rueil Cedex, France) which says that listeners writing in for a QSL-card may send £1 or \$1 notes instead of 2 IRCs which would of course be a lot cheaper. 4IFR has also compiled a list of 100 songs played in the station's programmes, all these are exclusively by Australian or New Zealand bands/artists. New stickers are now available, too.

Finally today, here's a rather brief Q S L - C O R N E R :

*station	*freq	*days	*sent	*received
Canzoni Radio	6282	31	2xRP	QSL-card, progr.schedule, letter
R.London	1616	11	2xRP	QSL-miniposter, pers.letter, photocopied pictures of the studio/tx/antenna
Radio Meteor	7315	76	2IRCS	QSL-"card", letter
Union Radio	7372	37	IRC	PPC, letter

That's all for this time, 73s & all the best from R A D I O T E L E X

radotelex

Issue 154 / Vol. 6

July 2nd, 1989

c/o Duempter Strasse 6, D-4100 Duisburg 12, West Germany.

Hi there,

back on schedule with another 4-page-issue this time. In fact, this is more or less another "silly season edition" with little interesting or important happening at the moment with the exception of the raid at Radio Laser in England perhaps.

Anyway, you shouldn't forget to keep up your support during these weeks as everything is highly appreciated. Thanks a lot to all contributors, remember that deadline for RT 155 will be July 16th, 1989 ! By the way, if you go on holidays and you travel abroad please let us know if any shortwave pirates were audible where you've been (e.g. in the Mediterranean region or even further apart) !

Let's start off with all the updaters to last time's logbook ...

NEWS

Radio Dublin which continues to be on the air almost daily on FM 100.0 MHz, medium wave 1188 kHz as well as on shortwave 6912 kHz says reception reports are most appreciated and should be sent to Radio Dublin, Dublin 8, Eire.

Radio DX-34 was heard again today with a 90-minute-relay via Radio Karibu and gave out an address of Panoramastraße 24, D-7016 Gerlingen, west Germany. This is in contrast to a P.O.Box address announced previously which may no longer be in use. By the way, did you hear the competition mentioned in today's programme - the deadline for which is December 31st, 1988 :

UP-TO-DATE & INFORMATIVE • MONTHLY
♦ sample copy: 11rc or 75ct stamp ♦

Radio Orion, P.O.Box 1280, Rednall, Birmingham, B45 8SG, England, appears to have stopped putting out any Swinging Radio England/4FWS tapes for the time being. The "Big O" said they were short of presenters and that the tapes may be heard more than once. Orion is keeping a rock music format and can be heard every Sunday on 6299/25990 kHz.

Once again those operations from the Gaanderen area hit the airwaves last Sunday, July 9th, with Radio Torenvalk (Postbus 94, Zeddam, NL) testing a new 20-watt-tx on 6240 kHz. At the same time, Radio Orang Utan (Postbus 114, s'Heerenberg, NL) were running their first official broadcast on shortwave on 6206 kHz after a joined test with Torenvalk on 6223 kHz the week before. Additionally, Radio Tonair (Postbus 21, Gaanderen, NL) signed on during the morning using 6203 kHz and even caused some QRM to Orang Utan for a brief period of time. Well, does it really make sense to run QSOs from locations which are just a few miles away from each other? Perhaps some of you noted Radio Tonair describing Torenvalk's signal as "100%", see what I mean?

Since recently, mail intended for the "WMR Goes DX" programme on World Mission Radio can now also be sent to the following Dutch address, Postbus 141, 3900 Venendaal, Holland. The U.S. address is of course still in operation as well.

Issue 155 / Vol. 6

July 16th, 1989

c/o Duempter /wave 6, D-4100 Duisburg 12, West Germany.

Oh well ...

Sometimes you wish that two weeks have not yet passed by and that you're obliged to edit another issue of this magazine, simply because there's just very little to report about. Now then, this is the case today, so why bother right at the beginning. Please keep in mind that YOUR contributions are essential for this magazine, you can either drop us a line at the above address or phone in with logs and news in a couple of weeks' time, that's on Sunday, July 30th, 1989 between 1300 and 1600 hrs UTC please. Thanks a lot to everyone who has been involved in this issue anyhow and anywhere! Let's start off with the usual list of which logs were missed last time...

N E W S

The Free Radio Service Holland will not be on the air during July but should return in August. A new programme schedule is to be introduced very soon, too. Listen out for FRSH's 9th anniversary celebration which will also take place next month !

The station logged on 6275 kHz July 2nd (c/f RT 154) was in fact not Radio Meteor as we printed but a new Finnish operation called Radio Mayday. Meanwhile, Radio Meteor was heard (and fully IDed) the following Sunday, July 9th on 7370 kHz. The station was also announcing 11582 kHz but couldn't be logged there. Both Mayday and Meteor can be contacted c/o FRCF, P.O. Box 82, 40101 Jyväskylä, Finland.

Radio Mirage, P.O.Box 2778, Elverhoy, 9001 Tromso, Norway, inform us that the station should be back either next Sunday or the following one (July 23rd/30th). There will be an early morning broadcast on 25 metres starting at 0700 UTC, listen out between 11480 and 11500 kHz, most likely the frequency will be 11490 kHz ! Later on in the morning there should be another transmission on either 41 or 48 metres (6280, 6310, 7290 or 7395 kHz should be monitored). There will be no relays put out that day. Tape recordings and reports are highly appreciated !

The Northern Ireland Shortwave Relay Service still offers airtime for other stations to hire. For details, please drop them a line at Andy Craig, 105 Bushmills Road, Coleraine, Co. Londonderry, BT52 2BS, Northern Ireland or ring (0265) 53104. So far we haven't heard of any relay stations which is probably because reception is rather difficult even in the UK due to low audio, the transmitter itself is said to produce 200 watts of power.

Radio Meteor was on the air this month on June 9th, 16th & 23rd using 7370 and 11582 kHz at 0800 UTC each time. There was also a brief transmission lasting about 10 minutes on 6270 kHz June 16th after another Finnish station called Radio Mayday signed off on 6275 kHz at 0910 UTC. July 23rd, Meteor was broadcasting on 6201 kHz 0930-0950 UTC as well as on 11563 kHz 1040-1140 UTC. The station can be contacted c/o FRC Finland, Box 82, 40101 Jyväskylä, Finland. The Dedemsvaart address is still announced at present.

The address for the Dutch medium wave station called Radio Mexico logged on 1611 kHz June 10th is Mex de Vries, Trekweg 9, 9918 PE Garrelswaer, Holland. This was the station's first international programme, normally Radio Mexico puts out Dutch or German polka music on Saturdays and Sundays. The operator has been transmitting for some 15 years now and has been raided once in 1982.

Radio Mirage, P.O.Box 2778, Elverhoy, 9001 Tromsø, Norway, was using 6280 (1100-1200 UTC), 7290 (around 1000 UTC) and 11485 kHz (0800-0845 UTC) on July 23rd but apparently had problems with their signal getting out, so the whole broadcast may be repeated within the next couple of weeks. Especially 26 metres seems to be worth checking out in the early morning hours.

Radio New World, a joined project of several Dutch stations including Radio Tonair, Torenvalk and Orang Utan, may be heard again soon with a parallel broadcast using three different transmitters, one operating on 48, the second one on 41 and the third one on 31 metres.

Still in Holland, Radio Orang Utan, Postbus 114, 7040 AC s'Heerenberg, Netherlands, told us now that the station is active on shortwave there won't be such a lot of mediumwave transmission in the future, only about every 3 months. Orang Utan now also offers T-shirts for sale, you can get one by sending 20,- DM to the above address.

A recent letter from Radio Scotland, another Dutch operation which is heard occasionally on medium wave 1611 kHz, informs us that the operator Albert has been to court in June after the police raided his station on September 13th, 1988. The case resulted in 14 days of conditional imprisonment along with two years of probationary period. No fine was imposed; this was the station's 4th raid, by the way. Radio Scotland may be back on shortwave, too, but things look uncertain at the moment.

According to Anoraks UK, TNR/The Northern Ireland S.W. Relay Service has put out its final transmission on 6273 kHz July 16th as they had "no option but to close". The station suffered from very low modulation levels which made them a difficult catch even in the UK in spite of a high power tx said to be used. Perhaps it would have been a better idea to use a lower power rig with good quality modulation instead of trying to become a "powerhouse".

Weekend Music Radio, 42 Arran Close, Cherry Hinton, Cambridge, CB1 4JH, England, has been rather active recently and has once again been picked up in Pennsylvania/USA (or even in Transsylvania ?) when WMR conducted another test on 15043 kHz July 16th 0000-0420 UTC.

If all goes well, deadline for RT 157 will be Sunday, August 13th, 1989, our lines will be open on that day between 1300 & 1600 hrs UTC. In case things have to be changed due to personal commitments, we shall send a note to all regular contributors (not too many these days, I'm afraid). Meanwhile, all the best, 73s & FFFR from radiotelex

NEWS DESK

Radio East Coast Commercial (Hunstanton address) will be active again on both 6815 and 11515 kHz from Sunday, August 6th. RECC operates regularly every 1st Sunday of the month featuring the famous DX-programme, the station also transmits on other Sundays from time to time.

Don't mess up RECC with Radio East Coast Holland, Postbus 536, 7900 AM Hoozevee, Netherlands which put out another test on July 23rd. It was announced that 7290 kHz would now become the station's main channel which replaces 7360 kHz. The latter frequency has become unusable due to strong utility QRM. RECH should be back in September and has in the meantime introduced some jingles which sound very good, some of them carry the voice of FRSH's Joop ter Zee.

Important news from the Free Radio Service Holland, there is a new mailing address available for the station now which is FRSH, Postbus 2727, 6049 ZG Herten, Netherlands. The Dedemsvaart maildrop is still in use as well but we have to advise listeners that the new address should be a lot more reliable and quicker. In contrast to what we printed a couple of weeks ago FRSH won't be back on the air before September or even October due to some more reorganisation.

A new project of German origin which should be relayed soon by Radio Waves Int'l is House Music Radio. The following address is available for that one: c/o Postfach 202, D-6440 Bebra, West Germany.

As we have some space left, here's another item on the Italian Radio Relay Service from Milano. IRRS has shifted its frequency slightly to 9865 kHz recently and is operating there every Sunday 0700-1145 UTC. The station will however be off the air on August 6th due to transmitter maintenance but should be back the following Sunday.

Stop press ... here are a few items which have just arrived after the official deadline ...

Rainbow Radio Germany may be back with their long promised nighttime broadcast next Saturday evening at 2300 UTC, probably on 6314 kHz. The original broadcast date mentioned a few weeks ago had to be cancelled due to technical problems. The address is P.O.Box 65027, 3002 DA Rotterdam, Holland.

Total Control Radio, c/o B.P. 130, 92504 Rueil Cedex, France, wrote in to tell that there will be another nighttime broadcast on Saturday evening, August 12th starting at 2000 UTC on 48 metres. If a favourable response is received more nighttime transmissions may be broadcast. A station newsletter should also be available shortly.

W.F.R.L. (Hunstanton address) has now issued their long awaited QSL Magazine with lots of info on the station. The August 13th transmission of WFRL will feature an MOA special between 1100 and 1200 UTC with recordings made on August 14th, 1967. In the hour before, the top 20 of that week will also be played.

Here are a few more logs we missed in the main part of this issue, all stations were heard in the UK :

July 22nd, 1989 (Saturday)
6229 Jolly Roger Radio, at 1026 UTC
6266 UNID, at 1200 UTC
6276 W.F.R.L., at 1019 UTC

July 23rd, 1989 (Sunday)
6272 TNR - FM, at 0821 UTC closing down the station yet again !
6315 UNID, at 0939 UTC

A D V E R T

According to the operator Frank N. Stein, Radio Maastricht, a rather new Finnish operation can now be contacted at the Wuppertal mailing address. The station has been noted a couple of times on 6275 kHz in Scandinavia so far.

Rumours say that the grand old reggae outlet from the Netherlands, Radio Rastafari plans to make a comeback to shortwave with an own transmitter. The address is still Postbus 162, 6680 AD Bommel, NL.

We were asked several times about the new address of Super Clan Radio which was announced to be Postbus 7315, Amsterdam, Holland. Now it seems the address is actually in operation as QSLs have been issued lately, in fact Radio 10 cards were sent out with the Super Clan logo on them. Radio 10 is the satellite delivered radio station Super Clan's operator Herbert Visser is working for at the moment.

In September, Radio Tower (Utrecht address) has been on the air for one year. To honour this fact, there will be a special line-up of programmes on 6240 kHz which reads as follows:

10.00 - 10.15 Peter de Jong - Good morning, Europe
10.15 - 11.00 Tom Clay - German service
11.00 - 12.00 Peter de Jong - The happenings of ...
12.00 - 13.00 Karen Jensen
13.00 - 14.00 Pim v/d Horst & Peter de Jong
14.00 - 14.45 Carl Andersen - Carl's Swedish service
14.45 - 15.00 Peter de Jong - Good-bye, Europe.

All times given are CEST/CET! That broadcast will be the last transmission for a while because of changing interest. On June 18th, Radio Tower carried out a test on 9912 kHz with good reception in East Germany. Tower also aired a test on 13680 kHz July 9th 0100 - 0600 UTC which resulted in a report from Finland. 15645 kHz was used for tests to North America, no response has been received for that yet. 20 watts of power was used on each occasion.

Slightly out of context, here's some more info on Dutch medium wave operations (a subject quite a lot of you seem to be interested in):

A popular channel these days is around 1408 kHz where the following three stations were noted lately. A station called "Zwarte Pedro" operates on 1408 kHz Sundays during daytime. "Manolito" is heard on Saturday morning on 1404 kHz, "Jessica" transmits on Saturday afternoon using 1404 kHz, the latter two stations both play gospel music! Radio Pepper which is active on 180 metres uses the following address (do you remember this one?)...Postbus 113, 9104 ZJ Damwoude, Holland.

This year's DX-camp at Merchweiler in West Germany saw an unexpected disturbance caused by the postal authorities who were searching the camp for unlicensed transmitters. After they couldn't find one, they took the receiver of a Swiss DXer who was present there and whose set also covered the police communication band. The receiver was returned after two hours, however, possibly due to some bad publicity the DBP had gained, the local press had been informed and complaints launched. After all, that must have been an exciting experience!

Finally, let us remind you of the deadline for issue 158 which is due out in a couple of weeks' time, on Sunday, August 27th, 1989. Our phone line will be open again that day between 1300 and 1600 UTC. Please don't phone in much later on as the magazine has to be ready for printing before Monday! Thanks a lot to all contributors to this issue, hope you'll be around again next time ... FFFR from radiotelex

Issue 157 / Vol. 6

August 13th, 1989

c/o Duempter / Waver 6, D-4100 Duisburg 12, West Germany.

Dear shortwave friends,

with the Sunday mornings getting less "exciting" these days, nighttime broadcasts seem to become more and more popular. Just recently, quite a steady amount of stations have been active on either Friday or Saturday night, usually in the 2000 - 2400 UTC time slot. A lot of you who regularly tune across the medium wave around that time, may now have even more choice with 3 or 4 stations active on 48 metres...

Let's see what will happen to such another innovative idea. Perhaps some regular broadcasts may prove that late night transmissions are a real alternative to Sunday mornings. Free Radio has always been good enough for experiments, is this the next one in line?

NEWS

Radio Atlantis SW has now introduced a new UK mailing address which is RLI, P.O.Box 37, Ashton under Lyme, Manchester, England (please don't put the station name on the envelope !). RASW can also be contacted through Postfach 220342, 5600 Wuppertal 22, West Germany. The station was active again on August 6th using 6200 kHz and should be back with shortwave broadcasts from time to time. The Atlantis staff is also running a monthly service on FM to SE-England.

Nighttime broadcasts seem to become more and more popular. Radio Confusion Int'l (32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England) will put out another transmission on Sunday night, August 27th on one of their 48 metre frequencies. Either 6290, 6300, 6308 or 6317 kHz will be used. The broadcast will feature plenty of alternative music and hellos to those 7 people who took the time to write in for RCI's nighttime broadcast in May. TX power is 15 watts fed into an inverted V aerial at least 8 metres above the ground.

Radio Heideroosje (where do they get these names from ? -ed) made its first shortwave broadcast on August 6th, 1989 with the help of Radio Action which was back with own programmes one week later. 6207 kHz was the frequency used. The address for both stations is Postbus 26, 7030 AA Wehl, Holland. Heideroosje, by the way, was one of the stations which took part in the "1508 kHz/Gaanderen"-network a few years ago on medium wave.

House Music Radio made it to the shortwave for the first time on Saturday night, August 12th using 6314 kHz. The broadcast apparently went out with the help of Rainbow Radio Germany. An address of HMR, Postfach 1243, 6685 Schiffweiler, West Germany was given out which can be used in addition to the one mentioned in RT 156.

Radio Indigo (Postbus 19074, 3501 DB Utrecht, Holland) now found a safe & good site to broadcast from. There are still a few antenna problems to solve but nothing very important. The Indigo staff hopes to be back on shortwave before the end of the year using their own transmitter.

A letter received from Jolly Roger Radio tells us that the station is often active on Friday or Saturday night 2200 - 2400 UTC on 6229 kHz and has earned quite a good response for these late night broadcasts. JRR presently uses 50 watts of power along with a dipole antenna. Jolly Roger Radio offers any station to broadcast shows from other free radio operators for a swop relay of JRR. If interested, drop them a line at P.O.Box 39, Waterford, Eire and remember to put the station's initials on the envelope only !

Station owners promise to take legal action against the authorities

WITH LOVE, PEACE, AND
THE BEST IN MUSIC
RADIO - CAROLINE

On Thursday, August 17th, premises both in the UK and in other European countries including Spain, Holland and Belgium were raided and a number of persons arrested or interviewed regarding the support of the radio ship from England and the Benelux.

The following day, Friday, August 18th, a DTI vessel as well as a tug with officials of the Dutch radio investigation service (RCD) approached the Ross Revenge during the morning. Around midday Radio 819 stopped transmission and relayed Caroline 558 instead. The captain of the Ross Revenge refused to give permission to the DTI to get on board for discussions about the future of the ship and its crew. The shortwave outlet on 6215 kHz was switched off by late Friday afternoon, it was still carrying the usual World Mission Radio at that time.

Caroline continued throughout Friday night on 558 kHz, Viewpoint 819 and Caroline 819 were also heard until 0300 hrs BST on Saturday. At 0400 the Dutch staff came back on the air as Radio 819 and both stations programmed throughout the morning. The shortwave transmitter remained off the air. 558 kHz was said to have ceased transmission on Saturday morning but broadcasts continued on 819. Other sources say that both medium wave channels were operating until the boarding around midday.

Things appeared fairly normal except for a number of "meaningful" records being played several times. At approximately 1240 hrs BST, Saturday lunchtime, the Dutch officials at last boarded the ship by force. Apparently, the captain of the Ross Revenge had no sufficient papers to prove that the ship was registered under the Panamanian flag. This was used by the authorities to justify the raid on the ship.

About 30 officials came on board and proceeded to switch off the transmitter. Reports say that station engineer Peter Chicago who tried to stop the men by locking himself up in the transmitter room and another member of the crew were beaten up. The station finally left the air at approximately 1308 hrs BST.

During the afternoon and evening, literally everything that had to do with Radio Caroline was removed from the ship including the studio gear, records, tape machines, papers and even the studio clock. Valves and coils were ribbed off the transmitters. In an act of vandalism the Dutchmen used sledgehammers to smash everything else they could not easily take with them. At least one generator was also destroyed. Only essential parts of the ship such as navigational systems were left untouched.

Shortly after the news of this violence the DTI issued a statement, claiming no British officials were involved in the boarding and that they were only there to observe the ship.

The Dutch vessel returned to Scheveningen harbour by Sunday morning. Dutch television was there to take pictures of what was left of Radio Caroline. There was a lot of radio/TV coverage of the event both in Britain and the Netherlands during the weekend.

There appears to be a couple of reasons for the raid, the first being that France, Hungary and Sweden have complained about interference caused by the shortwave outlet on 6215 kHz. Just 2 kHz above there is an internationally recognized maritime emergency frequency. Besides, the imminent launch of another two offshore stations (MV Nanell and Communicator) may well have been the deciding factor for the authorities to take such a step.

6215 along with 819 seemed to be mentioned a lot in the "discussions" suggesting that if 558 kHz had been on the air alone, the events of August 19th, 1989 might not have happened at all.

The Canadian owners of Radio Caroline are going to take legal action against the U.K. and Holland as well as the individuals concerned shortly. They claimed that several of the Dutchmen were drinking heavily, and that they manhandled and threatened the staff. A Caroline spokesman said "It seems that this whole episode got out of control at an early stage and the raiding parties went bezerk". The Canadian directors say they would bring charges of piracy, assault and criminal damage against them.

Despite other reports telling that the Ross Revenge has been towed to Rotterdam the ship is still at the old position on the North Sea. The aerial masts (not the array) are also still there but it is more than obvious that it would take a great effort to resume broadcasting from the Ross Revenge.

Personally speaking, it seems rather unlikely that Caroline will be able to make a comeback in the foreseeable future as the station now has to start again right from the bottom. Perhaps the most difficult problem is who is going to finance the return since the station has not really been a commercial success since its relaunch in 1983. We shall wait and see.

Of course, many free radio stations featured news & airchecks of the events. Weekend Music Radio was the first station to inform listeners about what had been going on during a late night broadcast on 6235 kHz. Several stations joined WMR for a QSO later on including the Voice of the Netherlands which put out a tape of the final minutes of Radio Caroline.

Sunday morning saw BRI appearing on 6230 kHz with an unscheduled broadcast. A special transmission of WFRL was advertised for 6275 kHz that morning but the station seemingly failed to go on the air. Radio East Coast Commercial also dealt with the situation in a broadcast on 6815 & 11515 kHz the same day.

This report is based on information supplied by Anoraks UK, Peter Messingfeld (Offshore-Spezialversand), Radio Netherlands' "Media Network" and Britain Radio International's "Radio File" programme.

Here's a list of organisations & magazines which provide regular coverage of the offshore stations :

Weekly Report, Anoraks UK, P.O.Box 539, Blackpool, FY1 4RE, England
Monitor magazine, 31 Avondale Road, Benfleet, Essex, SS7 1EH, England
Offshore Echo's Magazine, Le Hamel Vittefleury, 76450 Cany, France
Caroline Movement, 23 Grove Road, Grays, Essex, RM17 6JY, England

There are also the following info lines available with regularly updated offshore news items :

Nachrichten-Telefon des Offshore-Spezialversandes (German) 02161 / 673558 (FRG)
Anoraks UK Info-Line (English, 1900-0700 UTC only) 0044 274 480590
Caroline Movement Info-Line (English) 0044 884 258641

New to shortwave are Cosmos Radio who were heard via the Northern Ireland SW Relay Service on 6273 kHz this morning. The station announced a telephone number and seemed to be mainly interested in reports by phone. The station has been active on FM to Nottinghamshire before. Letters etc. for Cosmos can be sent c/o 105 Bushmills Road, Coleraine, Co. Londonderry, BT52 2BS, Northern Ireland.

Radio DX-34 informs us that their current mailing address is in fact DX-34, c/o Postfach 100350, D-7016 Gerlingen, West Germany. Letters sent to the address mentioned in RT 156 will reach the station anyway. The staff includes Nick Davis, Mr. O'Clock, DJJ and Tom Germany.

Radio Joystick made a comeback to shortwave this weekend using the relay facilities of Radio Waves Int'l on 7441 kHz as well as Radio Europe from Italy on 7294 kHz (0900-1100 UTC). In addition to this, there will be another relay over Radio Orion on 6298 kHz September 3rd. You can now contact Joystick c/o Postfach 100812, D-4330 Mülheim/Ruhr 1, West Germany in addition to the well-known Wuppertal maildrop.

Surprise, surprise! "The Mighty KBC" was logged this morning with a test transmission on 7312 kHz. The show was hosted by Tom de Wit and featured about the same style of programming as had been heard on his "WMR Goes DX" slot. Postbus 725, Arnhem, Holland was announced as the station's address.

Radio Meteor from Finland plans to air a nighttime broadcast during September. The transmission should go out on a Saturday evening at 2100 UTC on 48 metres. Either 6201, 6233, 6238, 6258 or 6273 kHz will be used. Box 82, 40101 Jyväskylä, Finland will get to them.

After being absent from shortwave for some time, Radio Pogo 104 (Wuppertal address) was heard again today relayed by a powerful Dutch station on 7291 kHz. Pogo hopes to be back about every two months via that relay in future.

Rainbow Radio Germany (Postbus 65027, 3002 DX Rotterdam, NL) should have new promo material available soon including stickers, info-sheets and even pennants ("Alternativwimpel"). A new set of QSL-cards is also in preparation, listeners are asked to send in a funny A6 size drawing which may become the station's QSL design. Various gifts will be sent out to the lucky winners, every entry will be rewarded.

Radio Starline intend to be heard at least once a month via Radio Waves Int'l from France, every last Sunday of the month until the end of this year. Reports on cassette are most welcome, tapes will be returned with a studio recording of the station. Starline also offers a 30-minute-video tape which shows the DJs producing a show. The video is available now and costs DM 25 or 14 US-\$ including the tape and everything. You can contact the station c/o Wuppertal.

New Zealand's one and only free radio outlet, 4IFR can now also be heard in Europe via Jolly Roger Radio. There should be further programmes of 4IFR aired during the course of September and October.

That's all for today, please don't forget that deadline for RT 159 will be September 10th, 1989. Special thanks to "A l'ecoute du Monde" and "Activity" magazines for their help and to all of you who contributed to this issue. Logs and news can be phoned in on that day between 1300 and 1600 hrs UTC, so give us a ring if you have something to report.

radiotelex

Issue 158 / Vol. 7

August 27th, 1989

c/o Duempter /WAVE 6, D-4100 Duisburg 12, West Germany.

Hello to you all,

this passed week must have been a sad one for everybody involved in free and offshore radio as Radio Caroline was knocked off the air by a raid of Dutch and British authorities on Saturday, August 19th. In order to give you a brief summary of what happened last weekend, Radiotelex has dedicated a couple of extra pages to the dramatic events on board the Ross Revenge. Before that, let's turn to our usual line-up of logs and news ...

As you may have noted, we have put some nighttime logs for Sunday into the Saturday section. This was done because we believe that those transmissions belong to Saturday as the general listening period begins on Saturday (e.g. VOTN on 6236 kHz August 20th responded to a QSO which took off on August 19th)... rather confusing, isn't it ... ?

NEWS DESK

Hopes for a near future return to the air for Radio Apollo Int'l (Hunstanton address) seem to be fading. Dave Scott is the only person left to run the station as both Duncan James and Mike Davis are involved elsewhere. Certainly any future from Apollo will take on a new sound following the departure of 66% of its presenters !

The court case following the raid at Radio Batida took place on June 21st. In the end, station operator Mike Ef had to pay a charge of 150 DM.

Radio Caldonia (Postbus 65027, 3002 DA Rotterdam, Holland) should make a return to the air with a nighttime broadcast starting at around 2100 UTC on approximately 6315 kHz.

Today's programme of Radio Marabu Int'l (c/o Wuppertal & Utrecht) included the first show put together by an organisation called S.I.A.M. which stands for Society for Industrial Arts and Music e.V. (Postfach 600712, D-8000 München 60, West Germany). The programme contained all sorts of industrial music and will be aired on a monthly basis in future. There should also be a test transmission going out on Saturday fairly soon.

Letters meant for Ozone Radio Int'l (6820 kHz) can now be sent to Prince Terry, c/o 32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England.

The Pirate Freaks Broadcasting Service now uses the following mailing address: c/o Postbus 19074, 3501 DB Utrecht, Netherlands.

Talking of address changes, Rainbow Radio Germany can now also be contacted through Postfach 6105, D-5190 Stolberg, West Germany in addition to the Postbus 65027, 3002 DA Rotterdam, Holland address.

Rumours have been around regarding a new "super station" project which will feature a handful of well-known free radio people presenting shows and taking it in turns to put out the broadcasts via their own station's tx. The line-up will include Andy Walker (WFRL - the brain behind the project), Roger Davis (BRI), Peter Verbrüggen (FRSH) and Peter Moss (Falcon) with possibly more names to come. The first broadcast is expected within the next few months.

Radio Titanic Int'l finally got some 10 reports for their January and June transmissions. Letters for the August transmission are still awaited from the Dedemsvaart mailbox. RTI would like to point out that it wasn't the station's fault that replies take quite a long time! Titanic is going to use the Utrecht mailing address as from 1990 onwards.

Radio Tower today celebrated their 1st anniversary with a special broadcast on 6238 kHz as well as a competition. The most outstanding reception reports will receive various gifts, the main prize is "25 years of Radio Caroline memories" by Hans Knot. The station will return on 6238 kHz in October with a one-hour-broadcast to announce the winners. Radio Tower will then change to 9912 kHz for good.

UKGM were heard on bank holiday Monday August 28th on 6930 kHz but utility cut down the station's signal. UKGM is a former SW station who used to be active some years ago, power is thought to be 40 watts.

U.S. pirate WKND plans tests to Europe in the near future on a frequency between 15050 and 15150 kHz. Their address is PO Box 628, Slanesville, WV 25444, USA. Please note that this address is now valid for all stations that formerly used the Beaver Falls maildrop! By the way, no further news on WJDI who were going to test to Europe on 15045 kHz with 1500 watts of power.

4IFR - New Zealand can now also be contacted c/o P.O.Box 39, Waterford, Eire.

Before we forget, deadline for RT 160 will be September 27th, 1989. News and logs can be phoned in on that day for the final time, so why not ring in then.

In the meantime, all the best, 73s & FFFR
- and remember it's the jungle out there ...

radiotelex

Issue 159 / Vol. 7

September 10th, 1989

c/o Duxempter / Waver 3, D-4100 Duisburg 12, West Germany.

Fool if you think it's over ...

well, not yet I should say. Anyway, I have eventually decided to cease publishing Radiotelex, the final issue will be RT 160 and should come out at the end of this month.

There are various reasons for taking this decision. I have recently felt that editing this magazine is more and more interfering with personal commitments such as Sunday work. These commitments, of course, have to take priority. Keep in mind that RT is only a nice occupation for your spare time, it's not my job!

Besides, I have also lost interest in the hobby a bit. After all, I'd like to be just a listener to free radio stations whenever I have the time but without the obligation to log as much as possible for RT. The level of contribution from you has also decreased considerably during the last few months, too.

Subscription fees will be returned with our final issue except for sums of less than 3 DM. Subscribers from Germany will all get a cheque, readers from abroad will either get cash or a eurocheque. Now then, after all that "bad news" back to the real information ...

NEWSDesk

Before we begin this time, special thanks to "A l'ecoute du Monde" and "Activity" magazines for supplying valuable information !

Radio Europe (Milano/Italy) are reported to increase power to 500 watts soon in order to improve reception in Northern Europe. At present, just 40 watts are used on 7294 & 27827 kHz.

Indigo Radio (Utrecht mailing address) will soon be active on 7310 kHz with a 60-minute-show. That programme will be relayed by another station once again but Indigo hopes to be back with an own transmitter in October or November this year.

CURRENT PIRATE LIST

Another German station, Radio Starline (Wuppertal m drop) should be heard every last Sunday of the month on 7441 kHz courtesy of Radio Waves International's relay service. The September programme includes German oldies and listeners music requests. Starline is also looking for an FM rig of up to 6 watts power as well as a low powered shortwave tx (less than 5 watts) to be used along with an amplifier.

PUBLICATIONS

It must have been a strange coincidence that three free radio publications vanish within less than a month's time. Apart from RT, Anoraks UK have recently produced their final issue of "Weekly Report" but the organisation continues as a free radio memorabilia mailorder business (P.O.Box 539, Blackpool, FY1 4RE, England). The comprehensive address directory called Current Pirate List is suspended for the time being. The final list of CPL which was edited on August 16th, 1989 can still be ordered from Kännärsvägen 13D220, 22246 Lund, Sweden and costs 2 US-\$/skr 10/£ 1.

Of course, there are still some magazines around, the following ones all deal with shortwave pirates :

Activity Magazine, 3 Greenway, Harold Park, Romford, Essex, RM3 0HH, England (every 4-5 weeks, SW & MW pirates, 75p/4 IRCs).

FRS Goes DX, Postbus 2727, 6049 ZG Herten, Holland (once a month, offshore, SW pirates & FRS news, 4x 80 Pfg stamps/£ 1/4x 75 ct).

PIN-Magazine, Postfach 220342, D-5600 Wuppertal 22, West Germany (about every 3-4 months, private radio, SW pirates & features, DM 3,-/3 IRCs)

The Pirate Pages, Box 117, Points, WV 25437, USA (new address !)(U.S. pirates, 2 IRCs)(Ask for their sales catalogue as well).

c/o Duempter Strasse 6, D-4100 Duisburg 12, West Germany.

** The Final Issue **

Well, what else is there to say in this editorial but to thank all of you who have participated in RT by either writing or phoning in with logs & news or simply by reading it since the magazine took off the ground in August 1983. Thanks for your great support ! Anyway, we still have a job to do before we actually say good-bye... let's get on with the news file right now ...

Addresses. Postfach 202, 6440 Bebra 1, West Germany is no longer available for any free radio station. House Music Radio, one of the stations using that address, can now be contacted c/o Postfach 1243, D-6685 Schiffweier, West Germany only.

Radio Caldonia will be back in October with a Saturday nighttime transmission on 48 metres. This is probably the last chance to hear the station on shortwave as the staff has decided to move back to FM.

Radio Mandarine should finally have their very first show broadcast around Christmas this year, probably relayed both by Radio Waves Int'l and Jolly Roger Radio. You can contact the station c/o Utrecht.

Radio Orion, P.O.Box 1280, Rednall, Birmingham, B45 8SG, England, intends to test on 26 MHz again around Christmas. The station received some good reports from Germany for this service last year !

Passion Radio is the name of a relatively new German station with Saturday nighttime broadcasts on 48 metres. The first transmission took place on September 2nd. Passion uses a 50-watt-tx which seems to get out very well indeed. 13 reports were phoned in last night at the station's line (FRG) (04931-8899) from all across Central Europe. Due to technical problems, however, the big tx had to be replaced by another 15-watt-rig which is also available. You can contact the station c/o Postbus 19074, 3501 DB Utrecht, Holland.

One of Rainbow Radio Germany's transmitters were apparently stolen during a mobile broadcast on 7366 kHz which started on Saturday, September 23rd at 2200 UTC. When the operators returned to the site this morning all the equipment was gone including an expensive auto-reverse tape deck, the tx itself as well as the aerial.

Rock FM / RFM, 105 Newport Road, London, E10 6PH, England are currently on the air in the London area on FM 92.05 MHz every Sunday 0800 - 2400 hrs. In June this year, RFM began to relay the FM service on 6317 kHz using just 10 watts. Special S.W. programmes have been put out between 1000 and 1100 BST but these are suspended at the moment. There have also been some nighttime tests on 6317 kHz during the week.

Star Club Radio (c/o Postfach 220342, D-5600 Wuppertal 22, West Germany) hopes to be heard via Radio California on 48 metres from time to time in future. According to station manager Roy Clark who formerly ran a Hamburg FM pirate called "Radio Süderelbe" an own 30-watt-tx should be introduced in the summer next year.
